Rehabilitation William Kraus, Steven Keteyian, 2007-06-15 The era of cardiac rehabilitation in the United States dates back at least thirty years when Herman Hellerstein at Case Western Reserve and Andy Wallace at Duke and Ken Cooper in Dallas envisioned that a comprehensive lifestyle approach to the rehabilitation and prevention of patients having had a cardiac event would potentially yield great benefits for the individual patient and the health care system Until that time the thought of vigorous exercise in the cardiac patient soon after an event was close to anathema One of us WEK was introduced to Herman Hellerstein in Cleveland in the late 1960s when his father sought medical opinion from him for a cardiac condition WEK was introduced to Andy Wallace in 1979 by which time the latter had started a multidisciplinary geographically regional cardiac rehabilitation program at Duke based upon consultations with Hellerstein and Cooper By then cardiac rehabilitation was progressing beyond the vision of exercise only and since then the concept of cardiac rehabilitation has grown into the comprehensive multidisciplinary program that we know today and that we attempt to describe in this volume The practice of cardiac rehabilitation has grown and metamorphosed in the last thirty years in parallel with the growth and metamorphosis of the practice of cardiovascular medicine During the formative stages of cardiac rehabilitation the use of coronary care units was in its infancy The coronary artery bypass operation was less than ten years old The LIMA bypass had not been invented

Diabetes and Cardiovascular Disease Michael T. Johnstone, Aristidis Veves, 2007-10-28 The cause of diabetes mellitus is metabolic in origin However its major clinical manifestations which result in most of the morbidity and mortality are a result of its vascular pathology In fact the American Heart Association has recently stated that from the point of view of cardiovascular medicine it may be appropriate to say diabetes is a cardiovascular disease ¹ But diabetic vascular disease is not limited to just the macrovasculature Diabetes mellitus also affects the microcirculation with devastating results including nephropathy neuropathy and retinopathy Diabetic nephropathy is the leading cause of end stage renal disease in the United States while diabetic retinopathy is the leading cause of new onset blindness in working age Americans The importance of this text on Diabetes and Cardiovascular Disease is evident by the magnitude of the population affected by diabetes mellitus Over 10 million Americans have been diagnosed with diabetes mellitus while another 5 million remain undiagnosed The impact from a public health perspective is huge and increasing As the population of the United States grows older more sedentary and obese the risk of developing diabetes and its complications will increase Epidemiological studies have identified diabetes mellitus as a major independent risk factor for cardiovascular disease Over 65% of patients with diabetes mellitus die from a cardiovascular cause The prognosis of patients with diabetes mellitus who develop overt clinical cardiovascular disease is much worse than those cardiovascular patients free of diabetes mellitus [Handbook of Complex Percutaneous Carotid Intervention](#) Jacqueline Saw, Jose Exaire, David S. Penn, 2007-11-06 Over the past 5 years there has been great excitement and controversy in the scientific financial and lay literature for the potential of stem cell based strategies for the prevention and treatment of chronic heart failure CHF Not that long ago we believed we were born with a set number of cardiac myocytes and that once damaged there was no hope to replace them The interest in the field stems from the magnitude of cardiovascular disease in the world Our ability to treat and help patients survive acute myocardial infarction MI has resulted in a near epidemic of CHF There are more than 5 million Americans who currently carry the diagnosis of CHF With more than 1 million MIs a year in the United States there are approx 500 000 new cases of CHF diagnosed each year The goal of Stem Cells and Myocardial Regeneration is to present in a coherent manner the current state of knowledge of stem cell based therapies for cardiac dysfunction including current findings in both the laboratory and the clinic trials The first section of this Stem Cells and Myocardial Regeneration focuses on the magnitude of the problem and the successes and failures of what we consider optimal medical therapy It is on this background that stem cell based therapy needs to build **Surgical Management of Congestive Heart Failure** James C.
