Visual Training Aids International Civil Aviation Organization, 2004 Competency-Based Education in Aviation Suzanne K. Kearns, Timothy J. Mavin, Steven Hodge, 2017-05-15 Whether a trainee is studying air traffic control piloting maintenance engineering or cabin crew they must complete a set number of training hours before being licensed or certified The aviation industry is moving away from an hours based to a competency based training system Within this approach training is complete when a learner can demonstrate competent performance Training based on competency is an increasingly popular approach in aviation It allows for an alternate means of compliance with international regulations which can result in shorter and more efficient training programs However there are also challenges with a competency based approach The definition of competency based education can be confusing training can be reductionist and artificially simplistic professional interpretation of written competencies can vary between individuals and this approach can have a high administrative and regulatory burden Competency Based Education in Aviation Exploring Alternate Training Pathways explores this approach to training in great detail considering the four aviation professional groups of air traffic control pilots maintenance engineers and cabin crew Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency based approaches in their fields Research based and practical strategies for the effective creation delivery and assessment of competency based education are described in detail **English in Global Aviation** Eric Friginal, Elizabeth Mathews, Jennifer Roberts, 2019-11-14 Taking readers step by step through the major issues surrounding the use of English in the global aviation industry this book provides a clear introduction to turning research into practice in the field of English for Specific Purposes ESP specifically Aviation English and a valuable case study of applied linguistics in action With both cutting edge research and evidence based practice the critical role of English in aviation is explored across a variety of contexts including the national and global policies impacting training and language assessment for pilots air traffic controllers ground staff and students English in Global Aviation teaches readers how to apply linguistic research to real world practical settings The book uses a range of corpus based findings and related research to provide an effective analysis of the language needs of the aviation industry and an extended look at linguistic principles in action Readers are presented with case studies transcriptions radiotelephony and a clear breakdown of the common vocabulary and phrasal patterns of aviation discourse Students and teachers of both linguistics and aviation will discover the requirements and challenges of successful intercultural communication in this industry as well as insights into how to teach develop and assess aviation English language courses Avionics and Aviation Support Equipment United States.
