**QUESTION** I have a 10-year-old son who has been diagnosed with attention deficit hyperactivity disorder (ADHD). He has been taking Ritalin for the past 6 months. I am concerned about the long-term effects of this medication. Can you provide information on the safety and effectiveness of Ritalin for children with ADHD?

**ANSWER** Ritalin (methylphenidate) is a stimulant medication commonly used to treat ADHD. It has been shown to be effective in improving attention, reducing hyperactivity, and improving overall functioning in children with ADHD. However, like all medications, it can have side effects. Common side effects include decreased appetite, weight loss, and insomnia. More serious side effects, such as changes in heart rate and blood pressure, are rare but can occur. It is important to monitor your child closely while on Ritalin and to discuss any concerns with their healthcare provider. Additionally, behavioral therapy and other non-pharmacological interventions can be helpful in managing ADHD symptoms.
