Worldwide maize is the third most important cereal after rice and wheat It occupies 197 million hectares of planted area Asia contributes to nearly 30 percent of global maize supplies and area and production of the crop is rapidly increasing in the continent Minimum support prices swelling market demand from the animal feed and processing industries as well as human consumption have all led to increased maize production in zones where precipitation limits rice cultivation However maize production is currently threatened by the arrival in Asia in 2018 of the fall armyworm FAW *Spodoptera frugiperda* J E Smith a native to North America It invaded India in 2018 and since then it has marched to most of the Asian countries In 2019 its presence was confirmed in 13 Asian countries including Cambodia China India Indonesia Japan the Lao People s Democratic Republic Malaysia Myanmar Nepal the Philippines the Republic of Korea Sri Lanka and Viet Nam In 2020 it was confirmed in Australia Timor Leste and Papua New Guinea In August 2021 it reached the Solomon Islands posing a serious threat to other Pacific islands FAW is a fast dispersing migratory transboundary insect pest While high FAW incidences have been reported on several crops in Asia the most important economic damage caused is to maize followed by sorghum The FAW invasion threatens the food security of millions of family farms in Asia with smallholder farmers being especially vulnerable The

negative economic impact of FAW is not only evident in yield loss the pest also leads to a significant increase in insecticide applications with associated health environmental and cost issues At the same time resilience to FAW on the continent is currently weakened by the limited access to necessary tools technologies and sustainable integrated pest management IPM practices for FAW Thus there is an urgent need to implement an effective approach to FAW management in Asia Grants Administration United States.
