Handbook of Vacuum Arc Science & Technology Raymond L. Boxman, David M. Sanders, Philip J. Martin, 1996-12-31

This is a comprehensive text describing the basic physics and technological applications of vacuum arcs Part I describes basic physics of the vacuum arc beginning with a brief tutorial review of plasma and electrical discharge physics then describes the arc ignition process cathode and anode spots which serve as the locus for plasma generation and resultant interelectrode plasma Part II describes the applications of the vacuum arc for depositing thin films and coatings refining metals switching high power and as sources of intense electron ion plasma and x ray beams Handbook of Carbon,

Graphite, Diamonds and Fullerenes Hugh O. Pierson, 2012-12-02 This book is a review of the science and technology of the element carbon and its allotropes graphite diamond and the fullerenes This field has expanded greatly in the last three decades stimulated by many major discoveries such as carbon fibers low pressure diamond and the fullerenes The need for such a book has been felt for some time These carbon materials are very different in structure and properties Some are very old charcoal others brand new the fullerenes They have different applications and markets and are produced by different segments of the industry Few studies are available that attempt to review the entire field of carbon as a whole discipline Moreover these studies were written several decades ago and are generally outdated since the development of the technology is moving very rapidly and scope of applications is constantly expanding and reaching into new fields such as aerospace automotive semiconductors optics and electronics In this book the author provides a valuable up to date account of both the newer and traditional forms of carbon both naturally occurring and man made This volume will be a valuable resource for both specialists in and occasional users of carbon materials *Code Compliance for Advanced Technology Facilities* William

R. Acorn, 1994-12-31 Facilities which utilize hazardous liquids and gases represent a significant potential liability to the owner operator and general public in terms of personnel safety and preservation of assets It is obvious that a catastrophic incident or loss of property or personnel is to be avoided at all costs This book was conceived to give the reader a guide to understanding the requirements of the various codes and regulations that apply to the design construction and operation of facilities utilizing hazardous materials in their processes *Molecular Beam Epitaxy* Robin F.C. Farrow, 1995-12-31 In this volume the editor and contributors describe the use of molecular beam epitaxy MBE for a range of key materials systems that are of interest for both technological and fundamental reasons Prior books on MBE have provided an introduction to the basic concepts and techniques of MBE and emphasize growth and characterization of GaAs based structures The aim in this book is somewhat different it is to demonstrate the versatility of the technique by showing how it can be utilized to prepare and explore a range of distinct and diverse materials For each of these materials systems MBE has played a key role both in their development and application to devices *Diamond Chemical Vapor Deposition* Huimin Liu, David S. Dandy, 1996-12-31
