Handmade Electronic Music The Art Of Hardware Hacking:

Handmade Electronic Music Nicolas Collins, 2006 Providing a practical introduction for students of electronic music installation and sound art to the craft of making this text covers the basics of practical circuitry It tours the world of electronics encouraging artists to get to know the inner workings of basic electronic devices *The Cambridge Companion to Electronic Music* Nicholas Collins, Julio d'Escrivan, Julio d' Escrivan Rincón, 2017-11-09 Now updated and expanded with four new chapters this book explores the history theory creation and analysis of electronic music *Understanding Interaction: The Relationships Between People, Technology, Culture, and the Environment* Bert Bongers, 2021-12-21 Understanding Interaction explores the interaction between people and technology in the broader context of the relations between the human made and the natural environments It is not just about digital technologies our computers smartphones the Internet but all our technologies such as mechanical electrical and electronic Our ancestors started creating mechanical tools and shaping their environments millions of years ago developing cultures and languages which in turn influenced our evolution Volume 1 looks into this deep history starting from the tool creating period the longest and most influential on our physical and mental capacities to the settlement period agriculture domestication villages and cities written language the industrial period science engineering reformation and renaissance and finally the communication period mass media digital technologies and global networks Volume 2 looks into humans in interaction our physiology anatomy neurology psychology how we experience and influence the world and how we think we think From this transdisciplinary understanding design approaches and frameworks are presented to potentially guide future developments and innovations The aim of the book is to be a guide and inspiration for designers artists engineers psychologists media producers social scientists etc and as such be useful for both novices and more experienced practitioners Image Credit Still of interactive video pattern created with a range of motion sensors in the Facets kaleidoscopic algorithm based underwater footage of seaweed movement by the author on 4 February 2010 for a lecture at Hyperbody at the Faculty of Architecture TU Delft NL *The Routledge Research Companion to Electronic Music: Reaching out with Technology* Simon Emmerson, 2018-05-16 The theme of this Research Companion is connectivity and the global reach of electroacoustic music and sonic arts made with technology The possible scope of such a companion in the field of electronic music has changed radically over the last 30 years The definitions of the field itself are now broader there is no clear boundary between electronic music and sound art Also what was previously an apparently simple divide between art and popular practices is now not easy or helpful to make and there is a rich cluster of streams of practice with many histories including world music traditions This leads in turn to a steady undermining of a primarily Euro American enterprise in the second half of the twentieth century Telecommunications technology most importantly the development of the internet in the final years of the century has made materials practices and experiences ubiquitous and apparently universally available though some contributions to this volume reassert the influence and

importance of local cultural practice Research in this field is now increasingly multi disciplinary Technological developments are embedded in practices which may be musical social individual and collective The contributors to this companion embrace technological scientific aesthetic historical and social approaches and a host of hybrids but most importantly they try to show how these join up Thus the intention has been to allow a wide variety of new practices to have voice unified through ideas of reaching out and connecting together and in effect showing that there is emerging a different kind of global music

Experimental Music Since 1970 Jennie Gottschalk,2016-08-11 What is experimental music today Recent attempts to define or identify examples of experimental music have been cautious and subjective offering very little guidance to anyone with an interest in this field of activity Is experimental music a historical event that refers only to John Cage and his influence or does it have a greater spread and longevity The development of this musical practice over the last 45 years merits a fresh definition and discussion An experimental approach is not identifiable in specific sounds or techniques and its scope would be drastically limited if it were judged on the basis of social or aesthetic groupings or self identifications of composers

Musical Listening in the Age of Technological Reproduction Gianmario Borio, 2016-04-29 It is undeniable that technology has made a tangible impact on the nature of musical listening The new media have changed our relationship with music in a myriad of ways not least because the experience of listening can now be prolonged at will and repeated at any time and in any space Moreover among the more striking social phenomena ushered in by the technological revolution one cannot fail to mention music's current status as a commodity and popular music's unprecedented global reach In response to these new social and perceptual conditions the act of listening has diversified into a wide range of patterns of behaviour which seem to resist any attempt at

unification Concentrated listening the form of musical reception fostered by Western art music now appears to be but one of the many ways in which audiences respond to organized sound Cinema for example has developed specific ways of combining images and sounds and more recently digital technology has redefined the standard forms of mass communication Information is aestheticized and music in turn is incorporated into pre existing symbolic fields This volume the first in the series Musical Cultures of the Twentieth Century offers a wide ranging exploration of the relations between sound technology and listening practices considered from the complementary perspectives of art music and popular music music theatre and multimedia composition and performance ethnographic and anthropological research **Fan Identities and Practices in Context** Mark Duffett, 2017-10-02

Composers and sound artists have explored for decades how to transform microphones and loudspeakers from inaudible technology into genuinely new musical instruments While the sound reproduction industry had claimed perfect high fidelity already at the beginning of the twentieth century these artists found surprising ways of use for instance tweaking microphones swinging loudspeakers furiously around ditching microphones in all kinds of vessels or strapping loudspeakers to body parts of the audience Between air and electricity traces their quest and sets forward a new theoretical framework providing historic background on technological and artistic development and diagrams of concert and performance set ups From popular noise musician Merzbow to minimalist classic Alvin Lucier cult instrument inventor Hugh Davies or contemporary visual artist Lynn Pook they all aimed to make audible what was supposed to remain silent **Deleuze and Design** Betti Marenko, 2015-06-08

Drawing on a range of contributors case studies and examples this book examines how we can think about design through Deleuze and how Deleuze's thought can be re-designed to produce new concepts. It taps into the emerging networks between philosophy as an act of inventing concepts and design as the process of inventing the world. *The Music of Sounds and the Music of Things* Leigh Landy, John Richards, 2024-09-30 This book investigates two areas in which the appreciation of sonic creativity can be easily acquired across diverse cultures, ages and interests: the music of sounds, making music with any sounds part of today's sampling culture and the music of things and the creation of instruments using existent materials; another type of sampling involving the notion of instrument as composition as part of today's DIY or DIT 'do it together' culture. The book offers broad discussions regarding the music of things written by John Richards followed by the music of sounds written by Leigh Landy. These chapters are followed by a focus on the workshop demonstrating the collaborative and inclusive potential in both areas and a spotlight on eight artists with a broad diversity of backgrounds and approaches to sound and music who discuss their perceptions. The book's conclusion focuses on similarities and differences between the music of sounds and the music of things suggesting finally that both might form part of the 21st century's folk music landscape. The book is primarily aimed towards students interested in current forms of sonic creativity but will be of interest to those interested in broader issues of sampling, culture hacking and sound studies.
