Handbook of Neuropsychological Assessment Antonio E. Puente, Robert J. McCaffrey, 2013-11-11 The growth of clinical neuropsychology has been unprecedented This growth has been oriented more toward the provision of than toward the foundation for services Thus while a greater number of psychologists are performing a greater number of neuropsychological procedures there seems to us an uneven parallel growth between these services and the empirical foundations for them It should come to no one's surprise that increasingly aggressive attacks on the field have been leveled Despite these attacks clinical neuropsychology continues to enjoy exceptional growth within psychology and acceptance by other health

practitioners insurance companies legislators judges juries and above all consumers of our services Growth without self reflection is a dangerous enterprise as is growth without directions We find it disconcerting that existing and limited self analysis has assumed that neuropsychological dysfunction is immune to the same variables that affect psychological dysfunction Some attention has been paid to the most obvious ones such as age but all others have been ignored and or misunderstood This neglect has spawned a body of knowledge replete with questionable data and unfounded conclusions Hence it is surprising that clinical neuropsychologists consider themselves to be more scientifically sound than their regular clinical counterparts
