Calculus III Jerrold Marsden, Alan Weinstein, 2012-12-06 The goal of this text is to help students learn to use calculus intelligently for solving a wide variety of mathematical and physical problems. This book is an outgrowth of our teaching of calculus at Berkeley, and the present edition incorporates many improvements based on our use of the first edition. We list below some of the key features of the book.

Examples and Exercises The exercise sets have been carefully constructed to be of maximum use to the students. With few exceptions, we adhere to the following policies. The section exercises are graded into three consecutive groups:

- The first exercises are routine, modelled almost exactly on the examples; these are intended to give students confidence.
- Next come exercises that are still based directly on the examples and text, but which may have variations of wording or which combine different ideas; these are intended to train students to think for themselves.
- The last exercises in each set are difficult. These are marked with a star, and some will challenge even the best students. Difficult does not necessarily mean theoretical; often a starred problem is an interesting application that requires insight into what calculus is really about.

The exercises come in groups of two, and often four, similar ones.

The New Virtual Classroom Ruth C. Clark, Ann Kinn, 2007-03-22 The New Virtual Classroom draws on the most current research in multimedia learning, as well as practitioner experience, to show how to effectively harness the power of the virtual classroom. Written by Ruth Clark, co-author of the best-selling *e-Learning: The Science of Instruction*, and Ann Kinn, 34 recognized experts in instructional design and workforce learning, this important resource includes guidelines, research, and illustrative examples that clearly show how to leverage the powerful instructional features in the new virtual classroom.
