Being and Becoming in the Classroom Wolff-Mich Roth, 2002-05-30 Highlights the current chasm between teacher education theories/praxeologies and the actual experience of teaching/praxis. Many traditional teacher education programs emphasize teaching based on reflection and deliberation yet when a new teacher is in a unique situation there is not always time to step back and look at it objectively. Through Roth's extensive experience as a teacher he has learned that a teacher must live in the heat of the moment but also develop room to maneuver in the moment. These skills come only by actually being in the classroom working at the elbow of experienced teachers and discussing the events of the day with other teachers. Roth develops his theory by introducing the previously ignored element of temporality in teaching. When there is no time out for reflection a teacher must develop on the spot decision making skills. In part one he presents the ideas of being in the classroom with students and being with other teachers. Other concepts that emerge are habitus, perceptions and expectations that lead to action. Spielraum: room to maneuver in situations and relationality knowing how to act without reflection based on student/teacher rapport. In part two Roth asserts that when novice teachers coteach and engage in subsequent cogenerative dialoguing with seasoned professionals they are in the process of becoming in the classroom. Teachers college students majoring in education and professors will all benefit immensely from this book.

Comprehensive Organic Chemistry Experiments for the Laboratory Classroom Carlos A. M. Afonso, Nuno R. Candeias, Dulce Pereira Simão, Alexandre F. Trindade, Jaime A. S. Coelho, Bin Tan, Robert Franzén, 2016-12-16 This expansive and practical textbook contains organic chemistry experiments for teaching in the laboratory at the undergraduate level covering a range of functional group transformations and key organic reactions. The editorial team have collected contributions from around the world and standardized them for publication. Each experiment will explore a modern chemistry scenario such as sustainable chemistry application in the pharmaceutical industry, catalysis and material sciences to name a few. All the experiments will be complemented with a set of questions to challenge the students and a section for the instructors concerning the results obtained and advice on getting the best outcome from the experiment. A section covering practical aspects with tips and advice for the instructors together with the results obtained in the laboratory by students has been compiled for each experiment. Targeted at professors and lecturers in chemistry this useful text will provide up to date experiments putting the science into context for the students.
