pHealth 2019 Mauro Giacomini, 2019-05-15 Smart mobile systems like micro systems, smart textiles and implants and sensor controlled medical devices together with related networks and cloud services are important enablers for telemedicine and pervasive health to become the next generation of health services. Social media and gamification have added further to pHealth as an ecosystem. This book presents the proceedings of pHealth 2019, the 16th in a series of international conferences on personalized health held in Genoa, Italy from 10-12 June 2019. The book includes 1 keynote, 2 of 4 invited talks, 36 oral presentations and 7 poster presentations from a total of 141 international authors. All submissions were critically reviewed by at least two independent experts and a member of the Scientific Program Committee. This process resulted in a full paper rejection rate of more than 30%. Besides wearable or implantable micro and nano technologies for personalized medicine, this volume addresses topics such as legal, ethical, social and organizational requirements and impacts as well as necessary basic research for enabling future proof care paradigms. Such participatory, predictive, personalized, preventive and effective care settings combine medical services and public health prevention, social and elderly care but also wellness and personal fitness. The multilateral benefits of pHealth technologies for all stakeholder communities offer enormous potential for the improvement of both care quality and industrial competitiveness and also for the management of health care costs. Hence the book will be of interest to all those involved in the provision of healthcare.

The Theology of Medicine and the Unique Design of the Human Body Michael Henein, 2023-11-09 Members of the animal kingdom are characterized by many similarities and patterns such as two eyes, two ears, one mouth and four limbs. They also have many obvious differences in habits and in what they survive upon; some are herbivores while others are carnivores. The design of the human body is a marvelous mystery. Humans are characterized by having legs for walking and arms and hands for skillful work. They have a sophisticated sensory system that can distinguish heat from cold and identify fine movements and distances. The human brain is indeed a great wonder with its unique creative ability that is not found in other members of the animal kingdom. What is truly amazing is the integrated function of the different systems of the human body, particularly the heart and the mind. This book explores many of the

unique anatomical and physiological features of the human body which cause one to respect the great wisdom behind such a well designed creature
