The Manual of Dates George Henry Townsend, 1877 *Manual of Head and Neck Reconstruction* Fiyin Sokoya, Aurora G. Vincent, 2024-12-23

This text will deliver revolutionary approaches to reconstructive surgery in a clear and consistent format. Head and neck reconstruction has long been thought to be a daunting, intimidating and tedious field of surgery. Microvascular head and neck reconstruction is one of the most advanced surgical options available for reconstruction. It is used to treat defects created by removal of tissue in the larynx, pharynx, oral cavity, salivary glands, tongue and skin. It is also utilized in combination with chemotherapy and radiation for the treatment of head and neck cancer. Due to the disfiguring nature of the removal of these tissues, microvascular reconstruction is important to return the face, head and neck to as normal as possible. This text reviews cutting edge surgical skills in head and neck oncologic surgery and facial plastic and reconstructive surgery. The Manual of Head and Neck Reconstruction will include step by step guides with clear illustrated coverage of regional and distant cutaneous, muscular, osseous flaps, donor site harvest and transfer for head and neck reconstruction. The book will discuss relevant anatomy, nuances of flap design, harvesting techniques, inset, ideal locations of flap use and flap combinations. It will also discuss preoperative preparations, intraoperative considerations, techniques for avoiding pitfalls and managing postoperative complications. There will be intraoperative pictures walking the audience through the surgeries in a detailed fashion with the goal of imparting an efficient, effective surgical philosophy. Exclusively to this text, the topic of surgical maneuvers designed to improve surgical efficiency and save hours of intraoperative time, limiting patient's time under anesthesia, will be discussed. This book was authored by experts in head and neck reconstruction trained by Dr. Yadro Ducic over the past 12 years. It is a great resource for many surgeons in the field of otolaryngology, head and neck surgery.

Manual of Head and Neck Reconstruction Using Regional and Free Flaps Boban M. Erovic, Piero Lercher, 2014-12-10

Ablative tumor surgery of the head and neck region often results in severe cosmetic and functional deformities. In these cases, microvascular free tissue transfer enables three dimensional reconstruction of head and neck defects. The selection of adequate donor tissue and a profound

knowledge of the human anatomy and the various harvesting techniques are paramount in ensuring successful reconstruction. Reflecting current surgical approaches, this book presents the most frequently used flaps in head and neck surgery, including detailed overviews as well as their respective pearls and pitfalls. Moreover, each section contains a synopsis and pre-operative checklist. The overlay technique merges high quality photographs with drawings and precisely illustrates the step to step descriptions of the different flap harvesting techniques, making this manual in pocket size an unique and accessible reference for both doctors in training and specialists in the field of otolaryngology, head and neck plastic maxillofacial and skull base surgery. Manual of Diagnostic Antibodies for Immunohistology Anthony Siew-Yin

Leong, Kumarasen Cooper, F. Joel W-M. Leong, 2003. The rapid acceptance of immunohistochemistry as an important and even indispensable adjunct to morphological examination and diagnosis requires the modern anatomical pathology laboratory to be conversant with and proficient in immunostaining procedures as well as methods of tissue processing and antigen retrieval and the underlying characteristics of the increasing number of antibodies and antisera available. This fully revised, expanded and updated edition provides a comprehensive list of antisera and monoclonal antibodies that have useful diagnostic applications in tissue sections and cell preparations. Various clones which are commercially available to detect the same antigen are listed and the sensitivities and specificities of the antibodies are discussed. Importantly, the authors, all pathologists with a wealth of experience in immunostaining procedures, provide fully referenced details and expert advice on each reagent with the reader will find invaluable. Finally, the appendices provide easily accessible and clear summaries of selected antibody panels for specific diagnostic situations, details of heat induced antigen epitope retrieval including the use of microwaves and a useful reference to the websites of the main antibody suppliers.
