Predictive Analytics, Data Mining and Big Data S. Finlay, 2014-07-01 This in-depth guide provides managers with a solid understanding of data and data trends, the opportunities that it can offer to businesses, and the dangers of these technologies. Written in an accessible style, Steven Finlay provides a contextual roadmap for developing solutions that deliver benefits to organizations. Designing Great Data Products Jeremy Howard, Margit Zwemer, Mike Loukides, 2012-03-23 In the past few years, we've seen many data products based on predictive modeling. These products range from weather forecasting to recommendation engines like Amazon's. Prediction technology can be interesting and mathematically elegant, but we need to take the next step: going from recommendations to products that can produce optimal strategies for meeting concrete business objectives. We already know how to build these products; they've been in use for the past decade or so, but they're not as common as they should be. This report shows how to take the next step to go from simple predictions and recommendations to a new generation of data products with the potential to revolutionize entire industries. **ICCWS2014-**

9th International Conference on Cyber Warfare & Security Dr. Sam Liles, 2014-03-24 Cloud Data Management Liang Zhao, Sherif Sakr, Anna Liu, Athman Bouguettaya, 2014-07-08 In practice, the design and architecture of a cloud varies among cloud providers. We present a generic evaluation framework for the performance, availability, and reliability characteristics of various cloud platforms. We describe a generic benchmark architecture for cloud databases, specifically NoSQL database as a service. It measures the performance of replication delay and monetary cost. Service Level Agreements (SLA) represent the contract which captures the agreed-upon guarantees between a service provider and its customers. The specifications of existing service level agreements (SLA) for cloud services are not designed to flexibly handle even relatively straightforward performance and technical requirements of consumer applications. We present a novel approach for SLA-based management of cloud-hosted databases from the consumer perspective and an end-to-end framework for consumer-centric SLA management of cloud-hosted databases. The framework facilitates adaptive and dynamic provisioning of the database tier of the software applications based on application-defined policies for satisfying their own SLA performance.

requirements avoiding the cost of any SLA violation and controlling the monetary cost of the allocated computing resources In this framework the SLA of the consumer applications are declaratively defined in terms of goals which are subjected to a number of constraints that are specific to the application requirements The framework continuously monitors the application defined SLA and automatically triggers the execution of necessary corrective actions scaling out in the database tier when required The framework is database platform agnostic uses virtualization based database replication mechanisms and requires zero source code changes of the cloud hosted software applications Planning for Big Data Edd
