than any other occupation on Earth and this math is important It is needed to make the physics useful But physics also has a sense of wonder And it is this wonder the ability to open our minds to new ideas that has captured my interest I wanted to see the new horizons I want to know why things were the way they were And I wanted to know what was true and what was not true But I also found out that sometimes the thing that you were most sure of turns out to be false and you are forced into a reevaluation And once you gained a new insight there is no going back Things will never be the same again This book is simply a submission of a protoscience recommendation the initial phase of the scientific method involving hypothesis formulation but not yet proven to be true or false It has two parts a philosophical Burden of Proof that explains the purpose of the singularity approach the Theory of Amorphism that explains matter and light This theory is bench marked against Newton s Einstein s Schrodinger s Dirac s and Maxwell s laws theories and equations Particle models are generated where the composite particles consist of matter and anti matter particles In these models the summation of masses must add up to zero since the basic elementary particles are much heavier than any known particles The relativistic movement of the masses provides the delta changes that give the particles their mass Likewise the internal forces are added together with the residual forces accounting for the charge of the particles This is an alternate approach to the current particle Standard Model This theory uses singularity spaces two dimensional 1 R flat spaces which are larger on the inside to explain Gravity Electromagnetic and Nuclear Forces
