Thompson,2009-09-25 A unique integrated treatment of computer modeling and simulation The future of science belongs to those willing to make the shift to simulation based modeling predicts Rice Professor James Thompson a leading modeler and computational statistician widely known for his original ideas and engaging style He discusses methods available to anyone with a fast desktop computer for integrating simulation into the modeling process in order to create meaningful models of real phenomena Drawing from a wealth of experience he gives examples from trading markets oncology epidemiology statistical process control physics public policy combat real world optimization Bayesian analyses and population dynamics Dr Thompson believes that so far

from liberating us from the necessity of modeling the fast computer enables us to engage in realistic models of processes in for example economics which have not been possible earlier because simple stochastic models in the forward temporal direction generally become quite unmanageably complex when one is looking for such things as likelihoods Thompson shows how simulation may be used to bypass the necessity of obtaining likelihood functions or moment generating functions as a precursor to parameter estimation Simulation A Modeler s Approach is a provocative and practical guide for professionals in applied statistics as well as engineers scientists computer scientists financial analysts and anyone with an interest in the synergy between data models and the digital computer *Limit Distributions for Sums of Independent Random Vectors* Mark M.
