Mcgraw Hill Comprehension Tests:

The Myths of Standardized Tests Phillip Harris, Bruce M. Smith, Joan Harris, 2011-01-16 Pundits, politicians, and business leaders continually make claims for what standardized tests can do, and those claims go largely unchallenged because they are in line with popular assumptions about what these tests can do, what the scores mean, and the psychology of human motivation. But what most of what these opinion leaders say and the public believes about standardized testing just isn't so. However, few members of the general public, not even concerned parents, have the time or the background to keep up with the latest findings of testing experts, psychometricians, and researchers. That's where *The Myths of Standardized Tests* comes in. In simple, accessible language, Harris, Smith, and Harris spell out the assumptions underlying standardized tests and point out what's true about them and what's just plain mythical. But they not only debunk common assumptions, they propose better ways to judge the success of our schools. They also offer readers suggestions for ways they can help reduce the burden of tests on their children. Appendixes offer readers contact information and suggestions for actions they can take to become part of the solution to the problem of overusing and misusing standardized tests. This volume provides a well-balanced and cross-disciplinary perspective on how researchers conceptualize inferences about learner acquisition and performances, as well as dependability and generalizability of findings. The book is a collection of chapters by prominent researchers in applied linguistics working in diverse domains such as vocabulary, syntax, discourse analysis, SLA, and language testing. The goal of the book is to bring attention to these issues which underpin much of applied linguistics research and to highlight what is considered good practice so as to buttress confidence in the research claims made. The book represents current thinking on fundamental research concepts in applied linguistics and can be used as a textbook in courses on research methodology in applied linguistics. The book is also an excellent source of in-depth analysis of research conceptualization for applied linguistics researchers and graduate students. *Exploring L1-L2 Relationships* Richard L. Early Reading Instruction Diane McGuinness,2006-01-20 Early Reading Instruction is a comprehensive analysis of the research evidence from early writing systems to computer models of reading In this book Diane McGuinness provides an innovative solution to the reading war the century old debate over the efficacy of phonics sound based versus whole word meaning based methods She has developed a prototype a set of elements that are critical to the success of a reading method McGuinness shows that all writing systems without exception are based on a sound unit in the language This fact and other findings by paleographers provides a platform for the prototype Other elements of the prototype are based on modern

research For example observational studies in the classroom show that time spent on three activities strongly predicts reading success learning phoneme symbol correspondences practice at blending and segmenting phonemes in words and copying writing words phrases and sentences Most so called literacy activities have no effect and some like sight word memorization have a strongly negative effect The National Reading Panel 2000 summarized the research on reading methods after screening out thousands of studies that failed to meet minimum scientific standards In an in depth analysis of this evidence McGuinness shows that the most successful methods children reading a year or more above age norms include all the elements in the prototype Finally she argues because phonics type methods are consistently shown to be superior to whole word methods in studies dating back to the 1960s it makes no sense to continue this line of research The most urgent question for future research is how to get the most effective phonics programs into the classroom
