Tony description High-Performance Buildings Anthony Robinson, MS, 2020-12-17 This book provides a blueprint for Robinson, 2013 action for readers making decisions about how to improve the energy efficiency and performance of new or existing buildings Suitable for both seasoned veterans and new managers it takes an objective and orderly approach to what is often a complex costly and time consuming process The book presents fundamental principles illustrated with case studies It thoroughly covers the topics in a concise technically accurate way The book is designed for architects engineers and construction managers Sustainable Facades Ajla Aksamija, 2013-03-27 Practical information on designing sustainable energy efficient building facades As energy and other natural resources are being depleted it has become clear that technologies and strategies that allow us to maintain our satisfaction with interior environments while consuming less of these resources are major objectives of contemporary facade design Sustainable Facades focuses on the strategies and approaches for designing sustainable high performance building facades and provides technical guidance for architects and designers This timely and useful guide presents strategies and technical guidelines for designing environmentally sensitive energy efficient facades based on scientific principles It provides climate specific approaches for minimizing energy consumption analyzes the thermal behavior of different facade systems and materials and illustrates with case studies how these approaches have been implemented on architectural projects It also discusses emerging facade technologies materials and systems Topics covered in this unique and indispensable guide include Climate based design approaches for high performance facades Characteristics of sustainable facades energy efficiency thermal behavior and moisture resistance Designing for thermal comfort lighting and glare control and acoustic quality Emerging technologies in facade design including smart materials double skin facades and facades as energy generators Case studies on building orientation and facade design tectonic sun exposure control external shading elements and more Design and Construction of High-Performance Homes Franca Trubiano, 2013-03-05 Both professionals and students are increasingly committed to achieving high performance metrics in the design construction and operation of residential buildings This book responds to this demand by offering a comprehensive guide which features architectural innovations in building skin technologies which make lighter more transparent buildings high performing energy free architectural design principles and advances in building integrated photovoltaics essential engineering principles controls and approaches to simulation for achieving net zero the advantages of integrated design in residential construction and the challenges and opportunities it engenders detailed case studies of

innovative homes which have incorporated low energy design solutions new materials alternative building assemblies digital fabrication integrated engineering systems and operational controls Divided into four parts the book discusses the requisite AEC Architecture Engineering and Construction knowledge needed when building a high performance home It also communicates this information across four case studies which provide the reader with a thorough overview of all aspects to be considered in the design and construction of sustainable homes With contributions from experts in the field the book provides a well rounded and multi faceted approach This book is essential reading for students and professionals in design architecture engineering civil mechanical and electrical construction and energy management Design on the Edge David W. Orr, 2008-02-15 The story of the building of the Adam Joseph Lewis Center at Oberlin College in the context of ecological design institutional learning and the green campus movement The story of the Adam Joseph Lewis Center at Oberlin College the first substantially green building to be built on a college campus encompasses more than the particulars of one building In Design on the Edge David Orr writes about the planning and design of Oberlin's environmental studies building as part of a larger story about the art and science of ecological design and the ability of institutions of higher learning themselves to learn The Lewis Center which has attracted worldwide attention as a model of ecological design operates according to environmental principles It is powered entirely by solar energy features landscaping with fruit trees and vegetable gardens and houses a Living Machine which processes all wastewater for reuse in the building or landscape Orr puts the Lewis Center into historical design context and describes the obstacles and successes he encountered in obtaining funds and college approval interweaving the particulars of the center with thoughts on the larger environmental and societal issues the building process illustrates Equal parts analysis personal reflection and call to action Design on the Edge illustrates the process of institutional change institutional learning and the political economy of design It describes how the idea of the Lewis Center originated and was translated into reality with the help of such environmental visionaries as William McDonough and John Todd and how the building has performed since its completion College and university administrators will spend 17 billion dollars on new buildings over the next few years Design on the Edge is essential reading for architects planners and environmentalists who need to sell the innovations of ecological design to wary institutions and for educators and students whose profession is undermined by the very buildings they work in and for anyone who has ever tried to change an organization for the better High Performance Building Guidelines New York (N.Y.). Department of Design and Construction, 1999 Building Performance Analysis Pieter de Wilde, 2018-07-23 Explores and brings together the existent body of knowledge on building performance analysis Shortlisted in the CIBSE 2020 Building Performance Awards Building performance is an important yet surprisingly complex concept This book presents a comprehensive and systematic overview of the subject It provides a working definition of building performance and an in depth discussion of the role building performance plays throughout the building life cycle The book also explores the perspectives of various

stakeholders the functions of buildings performance requirements performance quantification both predicted and measured criteria for success and the challenges of using performance analysis in practice Building Performance Analysis starts by introducing the subject of building performance its key terms definitions history and challenges It then develops a theoretical foundation for the subject explores the complexity of performance assessment and the way that performance analysis impacts on actual buildings In doing so it attempts to answer the following questions What is building performance How can building performance be measured and analyzed How does the analysis of building performance guide the improvement of buildings And what can the building domain learn from the way performance is handled in other disciplines Assembles the current body of knowledge on building performance analysis in one unique resource Offers deep insights into the complexity of using building performance analysis throughout the entire building life cycle including design operation and management Contributes an emergent theory of building performance and its analysis Building Performance Analysis will appeal to the building science community both from industry and academia It specifically targets advanced students in architectural engineering building services design building performance simulation and similar fields who hold an interest in ensuring that buildings meet the needs of their stakeholders High-Performance Double Skin Façade Buildings Mona Azarbayjani, 2022-07-13 This book provides a comprehensive theoretical platform for the use and construction of double skin fa ade projects The DSF concept has been used mostly in European buildings however its success in other climates should be addressed Increasing numbers of buildings are featuring double skin fa ade technology in the US however still relatively few have been studied for their performance in operation This book gives architects a practical guide to analyze and evaluate the actual performance of double skin fa ade buildings in different climatic contexts It is important for high performance buildings to have tools to evaluate a design's predicted performance to achieve specific sustainable goals. To determine that the application of DSF in different climates will provide better thermal comfort building simulation tools analyze various thermal comfort parameters through studies of the fa ade and compare them with the actual building s performance data The book takes the reader on an on site tour of eight DSF buildings around the US Interviews with the buildings architects and engineers owners and users offer additional perspectives and insights into the construction and performance of these developments in building design This will provide architects with a comprehensive understanding of the challenges and opportunities in integrating double skin fa ades into their projects **Building Systems for Interior Designers** Corky Binggeli, Taylor Lucas, 2024-04-16 BUILDING SYSTEMS FOR INTERIOR DESIGNERS Make design decisions informed by technical and structural knowledge with this essential guide Professional interior design demands more than simply an understanding of aesthetic and artistic considerations it also requires a detailed understanding of building systems and their interactions Design decisions must account for mechanical and electrical equipment building components and structural elements all of which can potentially shape a designer s work Building Systems for Interior Designers has long stood as the

key to understanding and evaluating these elements particularly key building systems like HVAC and plumbing and their impacts on interior design This Fourth Edition is fully updated to fit the needs of the CIDA certified interior design program and the NCIDQ exam The fourth edition of Building Systems for Interior Designers also includes Updated information on sustainable and energy efficient design Detailed coverage of topics including security concerns fire safety and designing secure spaces Classroom supplements including sample construction documents chapter specific discussion questions and more Building Systems for Interior Designers is ideal for students in interior design courses and new professionals studying Sustainable Construction Charles J. Kibert, 2022-03-10 SUSTAINABLE CONSTRUCTION DISCOVER THE LATEST EDITION OF THE LEADING TEXTBOOK ON SUSTAINABLE CONSTRUCTION AND GREEN BUILDING In the newly revised Fifth Edition of Sustainable Construction Green Building Design and Delivery the late Dr Charles J Kibert delivers a rigorous overview of the design construction and operation of high performance green buildings In the leading textbook on sustainable building the author provides thoroughly updated information on everything from materials selection to building systems Updated to reflect the latest building codes and standards including LEED v4 1 the book offers readers coverage of international green building codes and standards biomimicry ecological design focused assessment systems like SITES EDGE WELL and Fitwell and sustainable construction resilience Readers will learn to think critically about all aspects of green building and benefit from the inclusion of A thorough introduction to sustainable construction including the landscape for green buildings sustainable development sustainable design and the rationale for high performance green buildings An exploration of the foundations of green buildings including biomimicry and ecological design basic concepts and vocabulary and the green building movement Practical discussions of ecological design including a historical perspective contemporary ecological design In depth examinations of high performance green building assessment including focused assessment systems and international building assessment systems Perfect for upper level undergraduate and graduate level students in architecture architectural technology civil engineering and construction management Sustainable Construction is also an indispensable resource for anyone studying for the LEED Green Associate exam as well as industry professionals and Carbon-Neutral Architectural Design Pablo M. La Roche, 2017-07-14 The energy used to operate building owners buildings is one of the most significant sources of greenhouse gas emissions While it is possible to reduce emissions through climate responsive design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive heating and cooling strategies This new revised edition is updated throughout and includes a new chapter on building simulations Issues in Green Building and the Federal Response Eric A.
