High School Physics Translational Motion:

High School Physics Vishal Mody, 2015-12-22 This physics booklet was created to help students specifically with Vectors and Translational Motion the topic that most physics classes introduce first to their students This booklet has been made extremely concise yet explains the concepts in detail at the same time Also it is not designed to be your main study source but rather as an adjunct to your school teacher's notes There are also lots of practice questions with detailed solutions at the end to solidify the concepts you have learned This is a great book for students who want extra help in learning the concepts of Projectile Motion and getting ahead of the class

Self-organized Motion Satoshi Nakata, Véronique Pimienta, István Lagzi, Hiroyuki Kitahata, Nobuhiko J Suematsu, 2018-11-01 Self propelled objects particles droplets are autonomous agents that can convert energy from the environment into motion These motions include nonlinear behaviour such as oscillations synchronization bifurcation and pattern formation In recent years there has been much interest in self propelled objects for their potential role in mass transport or their use as carriers in confined spaces An improved understanding of self organized motion has even allowed researchers to design objects for specific motion This book gives an overview of the principles of self propelled motion in chemical objects particles droplets far from their thermodynamic equilibrium at various spatial scales Theoretical aspects the characteristics of the motion and the design procedures of such systems are discussed from the viewpoint of nonlinear dynamics and examples of applications for these nonlinear systems are provided This book is suitable for researchers and graduate students interested in physical and theoretical chemistry as well as soft matter
