

High velocity clouds

- High-velocity clouds (HVCs) are fast-moving collections of gas located in the halo of the Milky Way
- Traveling at speeds up to hundreds of kilometers per second, they differ significantly from the galaxy's rotation
- HVCs are important for understanding the inflow of gas into galaxies, possibly fueling star formation
- Their composition includes hydrogen and small amounts of heavier elements, suggesting a mix of primordial matter and material enriched by stars

Practical example: Astronomy

- High-velocity clouds (HVCs) are large, fast-moving masses of gas located outside the Milky Way galaxy
- In amateur astronomy, the observation of HVCs can provide clues about the movement and evolution of galaxies
- These clouds are composed mainly of hydrogen gas and move at speeds of 70 to 90 km/s
- Understanding HVCs helps astronomers learn more about the structures that make up the universe and how galaxies interact with their surroundings

High-Velocity Clouds Hugo van Woerden, Bart Wakker, Ulrich Schwarz, Klaas de Boer, 2006-01-28 On the occasion of the retirement of Ulrich Schwarz a symposium was held in Groningen in May of 1996 celebrating his contributions to the study of the interstellar medium including his work on the high velocity clouds The coming together of many specialists in the latter field prompted the idea of compiling a book containing their contributions and summarizing the status of our understanding of the high velocity cloud phenomenon This seemed especially worthwhile at the time since many exciting developments were taking place After the discovery of some H I clouds with high velocities about 40 years ago the subject had been dominated by 21 cm observations of H I emission Starting in the mid 1980s much progress was being made because of the availability of new instruments such as large ground based optical telescopes and UV observatories in space The connections between the work on high velocity clouds and other studies of the properties of the hot interstellar medium also became clearer

the driving agent of the interstellar matter cycle Since only fairly recently a sufficient amount of computing power has become available to tackle these problems with some prospect of obtaining a self consistent picture of the ISM a major goal of this workshop was to bring together observers and theoreticians sufficiently close so that intense discussions about the necessities and desiderata of modelling the ISM could be stimulated Observers have shown in great detail on this conference of what is seen on all scales of the ISM near and far and what boundary conditions would be appropriate for realistic models and theoreticians pointed out what assumptions and simplifications their codes need and how future observations could test their models As a first step towards this goal some self consistent numerical simulations with a minimum number of relevant physical processes were also presented on this meeting There was wide agreement that this approach to keep observers and theoreticians in close contact and also in sometimes quite controversial discussions will bear fruitful results in the near future

unmistakable The ever increasing flow of publications combined with the obvious necessity to keep the Reports at a reasonable size and price level has gradually forced the Commission Presidents to be more selective than before in drafting their Reports I have certainly stimulated them into that direction in order that Reports like these be valuable and lasting it seems imperative that the individual contributions have the character of a critical overall review where a fairly complete summary is given of the major developments and discoveries of the past three years and in which the broad developments and new trends be clearly outlined while at the same time essential problems for future research are identified With respect to the latter item I have suggested the Commission Presidents to add to their reports a brief section on scientific priorities for future research in the field of their Commissions In order to save space I have suggested to Commission Presidents that references to published papers are given on the basis of their number in the published issues of Astronomy and Astrophysics Abstracts For instance the indication 06 078 019 or AAA 06 078
