The Future of Post-Human Transportation Peter Baofu,2013-01-03 Can transportation really have such a destructive impact on society that as Jay Holtz Kay 1998 once forcefully wrote with the automobile industry as an example that the modern consequences of heavy automotive use contribute to the use of non renewable fuels a dramatic increase in the rate of accidental death social isolation the disconnection of community the rise in obesity the generation of air and noise pollution urban sprawl and urban decay WK 2012 This negative expectation from transportation with the automobile industry as an example here can be contrasted with an opposing positive expectation in the old glory days when as Skip McGoun 2012 thus reminded us we have sung songs about the glory and wonder that surrounds the very concept of the car Examples of this range from the 1909 tune In My Merry Oldsmobile to what is considered to be the first rock and roll song Rocket 88 in 1949 Motion pictures have portrayed expensive sleek sports cars associated with wealth and success One commercial described Hell as being a place where a teenager would have to drive a minivan Contrary to these opposing expectations and other views as will be discussed in the book transportation in relation to both networks and operations is neither possible or impossible nor desirable or undesirable to the extent that the respective ideologues on different sides would like us to believe This challenge to the opposing expectations from transportation does not mean that transportation is useless or that those interdisciplinary fields related to transportation

studies like urban planning environmental sustainability migration tourism transport economics traffic engineering transportation technology energy efficiency the tragedy of the commons and so on are unimportant Needless to say neither of these extreme views is reasonable Rather this book offers an alternative better way to understand the future of transportation especially in the dialectic context of networks and operations while learning from different approaches in the literature but without favoring any one of them or integrating them since they are not necessarily compatible with each other More specifically this book offers a new theory that is the panoramic theory of transportation to go beyond the existing approaches in a novel way If successful this seminal project is to fundamentally change the way that we think about transportation in relation to networks and operations from the combined perspectives of the mind nature society and culture with enormous implications for the human future and what the author originally called its post human fate PPI
