A Transformation Approach to Smarter Core Banking Alex Louwe Kooijmans,Rishi Balaji,Yasodhar Patnaik,Saket Sinha,IBM Redbooks,2012-09-23 The extensive experience brought by IBM to core banking transformation indicates that the most successful transformation approach is a progressive one in which modernization is a process that incorporates flexibility and business acumen and can adapt as requirements change Creating a componentized architecture that separates key constructs and their assets from the core transaction engine is a critical factor in achieving a successful transformation Such a scenario makes the architecture the central concern and allows a bank to benefit from the necessary flexibility and efficiency After the core architecture is established the bank can address each requirement and

modification on a case by case basis by choosing from custom and packaged options Further the core transformation method outlined in this IBM Redguide™ publication allows a bank to make deployment decisions based purely on business benefits by using a progressive program that delivers value at each step of the process and every step can be tailored to keep pace as needs and requirements change Finally this method ensures that the overall transformation process remains in line with evolving business objectives

Computer Supported Cooperative Work in Design I Weiming Shen, Zongkai Lin, Jean-Paul A. Barthès, Tangqiu Li, 2005-11-04 The design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and separately with various engineering tools which are located on different sites often for quite a long time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of detail In order to meet these requirements it is necessary to have effective and efficient collaborative design environments These environments should not only automate individual tasks in the manner of

traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project CSCW computer supported cooperative work in design is concerned with the development of such environments
