Mourou, David M. Bloom, Chi-H. Lee, 2013-03-07 Over the past decade we have witnessed a number of spectacular advances in the fabrication of crystalline semiconductor devices due mainly to the progress of the different techniques of heteroepitaxy The discovery of two dimensional behavior of electrons led to the development of a new breed of ultrafast electronic and optical devices such as modulation doped FETs permeable base transistors and double heterojunction transistors Comparable progress has been made in the domain of cryoelectronics ultrashort pulse generation and ultrafast diagnostics Dye lasers can generate 8 fs signals after compression diode lasers can be modulated at speeds close to 20 GHz and electrical signals are characterized with subpicosecond accuracy via the electro optic effect Presently we are experiencing an important interplay between the field of optics and electronics the purpose of this meeting was to foster and enhance the interaction between the two disciplines It was logical to start the conference by presenting to the two different audiences i.e. electronics and optics the state of the art in the two respective fields and to highlight the importance of optical techniques in the analysis of physical

processes and device performances One of the leading techniques in this area is the electro optic sampling technique This optical technique has been used to characterize transmission lines and GaAs devices Carrier transport in semiconductors is of fundamental importance and some of its important aspects are stressed in these proceedings **Semiconductor Devices for High-Speed Optoelectronics** , **Picosecond Electronics and Optoelectronics II** Frederick J. Leonberger, Chi Chiang, Frederico Capasso, Hadis Morkoc, 2012-12-06 Over the past five years there has been an enormous increase in the interest in and understanding of electronic and optoelectronic devices operating in the picosecond multigigahertz range This has been fueled in a significant way by the spectacular advances in picosecond laser technology electro optic sampling III V devices and wideband fiber optic systems Partly to address these advances a new conference jointly sponsored by the IEEE Lasers and Electrooptics Society IEEE LEOS and the Optical Society of America OSA was founded and its first meeting held in March 1985 The purpose of this meeting was to bring together workers in the areas of electronics and optoelectronics who share a common interest in the physics and technology of picosecond solid state electronic and optoelectronic devices their multigigahertz applications and ultrafast measurement techniques Emphasis was placed on the interdisciplinary aspects of these areas since each area is covered by its own topical meeting This meeting was quite successful and led to a second meeting of which this volume forms the proceedings **Silicon Photonics Design** Lukas Chrostowski, Michael Hochberg, 2015-03-12 This hands on introduction to silicon photonics engineering equips students with everything they need to begin creating foundry ready designs **Guyanese Achievers USA & Canada** , 2011 Guyanese Achievers USA and Canada is the result of collaboration between Vidur Dindayal and the Guyanese diaspora who shared with him its recommendations on whom to identify as examples of achievement This volume chronicles Guyanese people who reflect their nation's rich multi ethnic heritage These people demonstrate that Guyanese have been successful in North America for a long time For example Sir James Douglas became the governor of the colony of Vancouver Island and later the colony of British Columbia in the 1850s Today he is considered the father of British Columbia For Guyanese he is Guyana's first gift to Canada A statue of Sir James Douglas was unveiled in 2008 at his birthplace in Belmont Mahaica At the end of the first decade of the twenty first century the list of Guyanese who have been gifts to the United States and Canada is impressive Guyanese Achievers USA and Canada celebrates the academics actors doctors educators entrepreneurs and others who by demonstrating inventiveness and persistence have been recognized as exemplars of Guyanese achievement in North America **Emerging Optoelectronic Technologies and Applications** Yu-Hwa Lo, 1997 This book discusses some of the most important emerging optoelectronic technologies foreseen to have major technical and business impact in the future In this spirit four general technological areas have been selected optoelectronic display optical micro electro mechanical systems MEMS semiconductor lasers for wireless and loop applications and optoelectronic integration technologies In each of the four areas two review articles that provide the technical background and sample some of the most significant recent breakthroughs
