**The Hidden Power of Social Networks** Robert L. Cross, Andrew Parker, 2004 Identifying and Leveraging the Hidden Social Networks That Drive Corporate Performance In today's flatter organizations collaboration in employee networks has become critical to innovation and to both individual and companywide performance Executives spend millions on new organizational designs cultural initiatives and technologies to promote the sharing of knowledge and expertise across functional hierarchical and divisional lines Yet these efforts have achieved disappointing results Rob Cross and Andrew Parker argue that's because most managers have little understanding of how their employees actually interact to get work done In fact formal org charts fail to reveal the often hidden social networks that truly drive or hinder an organization's performance In this eye opening book Cross and Parker show managers how to find assess and support the networks most crucial to competitive success Based on their in depth study of more than sixty informal networks within organizations around the world Cross and Parker show how managers can implement a wide range of specific and inexpensive actions from bridging strategically important disconnects

in a network to eliminating information bottlenecks to recognizing key connectors that will enhance the powerful impact networks can have on performance and innovation

**Communication in Construction** Andrew Dainty, David Moore, Michael Murray, 2007-01-24 Communication within project based environments presents special challenges This is especially true within the construction industry where interaction tends to be characterised by unfamiliar groups of people coming together for short periods before disbanding to work on other endeavours This book examines communication at a number of levels ranging from interpersonal interactions between project participants to corporate communication between organizations Several non typical perspectives on the process of communication are introduced to encourage the reader to think about communication in a more innovative manner The combination of differing perspectives illustrates the diversity of communication problems facing those working within project based environments Practical guidance is provided on possible solutions to communication problems and a number of examples and case studies are presented

**Parallel Architectures and Their Efficient Use** Friedhelm Meyer auf der Heide, Burkhard Monien, Arnold L. Rosenberg, 1993-06-29 Research in the field of parallel computer architectures and parallel algorithms has been very successful in recent years and further progress is to be expected On the other hand the question of basic principles of the architecture of universal parallel computers and their realizations is still wide open The answer to this question must be regarded as most important for the further development of parallel computing and especially for user acceptance The First Heinz Nixdorf Symposium brought together leading experts in the field of parallel computing and its applications to discuss the state of the art promising directions of research and future perspectives It was the first in a series of Heinz Nixdorf Symposia intended to cover varying subjects from the research spectrum of the Heinz Nixdorf Institute of the University of Paderborn This volume presents the proceedings of the symposium which was held in Paderborn in November 1992 The contributions are grouped into four parts parallel computation models and simulations existing parallel machines communication and programming paradigms and parallel algorithms

Catherine Majumdar, 2012-12-06 This conference brought together experts from 15 countries to discuss application of Artificial Intelligence AI techniques to the nuclear industry It was apparent from the meeting that even those active in the field were surprised at the extent of work and the progress made There was a strong impression that application of this technology to nuclear power plants is inevitable The benefits to improved operation design and safety are simply too significant to be ignored This is a much different conclusion than might have been reached a few

years ago when the technology was new and people were struggling to understand its significance We believe that this meeting reflects a major turning point for the technology It has moved from being a topic understood only by specialists to a situation where users are the most active people in the field A broad array of innovative work is described from all of the participating countries The activity in the u s is large and diverse Although there is no nationally focussed policy for AI research in the U S many of these activities are reported here Japan and France have a strong drive to integrate AI technology into their nuclear plants and this is reflected in these proceedings
