NOTE: Disregard Step 1 when installing PARA-FLEX Flywheel Couplings.

2. **Flange Installation:** Press or shrink straight bored flange assemblies on the shafts. Install TAPER-LOCK® flanges per instructions packed with the bushings. TAPER-LOCK® flanges on coupling sizes 57 thru 131 are reversible to permit locating bushing screws on the inside or outside of the coupling as desired or convenient. Note: The PX140 flange assembly (used on the 172 coupling) requires a flange spacer ring which must be installed before mounting flange assembly on the shaft. On models with iron flanges the spacer ring is installed between the flange assembly and external clamp ring, and on models with steel flanges it is installed between the flange assembly and internal clamp ring. See Fig. 1.

WARNING: Because of the possible danger to persons(s) or property from accidents which may result from the improper use of products, it is important that correct procedures be followed: Products must be used in accordance with the engineering information specified in the catalog. Proper installation, maintenance and operation procedures must be observed. The instructions in the instruction manuals must be followed. Inspections should be made as necessary to assure safe operation under prevailing conditions. Proper guards and other suitable safety devices or procedures as may be desirable or as may be specified in safety codes should be provided, and are neither provided by Baldor Electric Company nor are the responsibility of Baldor Electric Company. This unit and its associated equipment must be installed, adjusted and maintained by qualified personnel who are familiar with the construction and operation of all equipment in the system and the potential hazards involved. When risk to persons or property may be involved, a holding device must be an integral part of the driven equipment beyond the speed reducer output shaft.

Fig. 1 Flange Spacer Ring Location

3. **Align Shafts:** Position shafts for angular and parallel alignment within $\pm 1/64"$ for normal industrial applications. Position flange assembly so that dimension "C" will be maintained. If shaft end float is to occur, locate shaft at the mid-position of end float. Measure dimension "C", in Table 1, at four places around the diameter. These measurements should not vary more than dimension "D". Where limited end float is required or sleeve bearings are used, consult DODGE.
4. **Flexible Element Installation:** Slip bolt ring over flange and rest it on shaft. Remove clamp ring screws and internal clamp ring. Place internal clamp ring inside the element and reassemble to flange seating the bead of the element on the flange. Tighten clamp ring screws alternately and evenly to the torque values shown in column "A" of Table 1.
