Performance Robert E. Kress, 2010 Shows you the innovative IT governance model developed by the largest consulting firm in the world This pocket guide provides you with an insider's detailed description of Accenture's IT governance policy and details its governance structure It will show how effective IT governance links IT strategy and IT decisions to Accenture's business strategy and business priorities Following the best practices approach set out in this pocket guide will serve as an excellent starting point for any organisation with ambitions to achieve high performance Benefits to business include Boost productivity How hard do you work in other areas of your business to cut costs and improve efficiency In testing economic times is the absence of a clear strategy for your business's IT governance still a realistic option Learning from Accenture's proven approach will enable you to increase your organisation's competitiveness over the longer term Coordinate your operations To ensure effective decision making and align your IT function with your broader business goals you need to make the structure of your IT governance fit your overall corporate governance structure That way you can make your IT work for your business Manage change effectively IT is crucial for realising the changes you want your business to make For this reason you cannot afford to have these changes treated merely as IT projects that have been foisted on the company by the IT department By bringing top management on board and giving business leaders a formal role in the IT governance of your organisation you will make the success of any project with an IT component much more likely Keep a grip on budgets The costs of IT projects are notoriously prone to overrun while some IT development programmes have promised more than they ever delivered The Accenture way of doing business is different Following the Accenture approach means ensuring that your IT investment is backed by a solid business case and measuring the return on investment following project completion High performance Chief executives now put high performance IT among their top strategic objectives So if you are looking to improve IT governance in your own organisation finding out what Robert E Kress has to say is as good a starting point as any This book will show you his company's best practice approach to the subject Whatever business you are in there is nearly always a clear link between the performance of your IT function and your company's overall results *IT Governance* Alan Calder, Steve Watkins, 2019-10-03 Faced with the compliance requirements of increasingly punitive information and privacy related regulation as well as the proliferation of complex threats to information security there is an urgent need for organizations to adopt IT governance best practice IT Governance is a key international resource for managers in organizations of all sizes and across industries and deals with the strategic and operational aspects of information security Now in its seventh edition the bestselling IT Governance provides guidance for companies looking to protect and enhance their information security management systems ISMS and protect themselves against cyber threats The new edition covers changes in global regulation particularly GDPR and updates to standards in the ISO IEC 27000 family BS 7799 3 2017 information security risk management plus the latest standards on auditing It also includes advice on the development and implementation of an ISMS that will meet the ISO 27001 specification and how sector specific standards can and should be

Governance Christian Häfner, 2010-05-04 Diploma Thesis from the year 2008 in the subject Computer Science Commercial Information Technology grade 1 0 TU Bergakademie Freiberg language English abstract Changing industry structures and altering rules of competition is why most companies today face a new challenge in creating a competitive advantage The meaning of Information Technology IT has changed from just being available to accelerating and facilitating processes to an integral part of the company's mission and strategy IT governance is what defines the holistic perspective of how to deal with and use IT especially in large companies The objective is to create advantages by aligning IT and corporate strategy in order to create value while minimizing risk and monitoring the performance of IT Many different frameworks and standards have emerged over the last years providing processes and control objectives for keeping the company's IT in a value adding track However an important issue seems to be the huge availability of various frameworks This mostly results in problems concerning the right decision on frameworks to be selected Implementing efficient IT governance requires using only those processes that cover the individual IT related issues and problems of a company best while ignoring unnecessary ones The use of frameworks is associated with costs and may quickly result in an inefficient use of IT governance The present thesis addresses this challenge and shall help IT decision makers to decide on an efficient framework or set of frameworks In order to do so a model analyzes the fit between discovered IT related problems and various existing publicly available frameworks Different surveys and market analyses will be used for identifying possible IT related problems The creation of problem clusters will help to determine the most efficient framework by measuring the coverage of processes by different frameworks As a result this thesis will provide an approach to avoid processes that may not be necessary while covering important ones for an efficient use of IT governance frameworks
