The role of irrigation in gearing agriculture development towards a broader economic growth is undeniable Accordingly irrigation is growing into key operational strategy for governments and their agencies to increase agricultural productivity thus combatting food insecurity and boosting overall growth While agriculture absorbs rural workforce generates income and increases food security it has become the most important driver in freshwater exploitation The rapid expansion of water demand leads to the generalized phenomena of imbalance between water supply and water demand This increasing pressure on water resources urges enhancing Water Use Efficiency Enhancing Water Use Efficiency requires actions at all levels from agricultural practitioners to scheme managers and up to the policy makers The objective of this Field Guide is to show practical measures to improve Water Use Efficiency in small scale agriculture based on case studies from Burkina Faso Morocco and Uganda The Book not only presents applicable Water Use Efficiency measures but also guide the readers through their real term implementation While the Guide provides complete set of instructions to improve Water Use Efficiency in order to reach optimal irrigation practices the successful outcome still depends on the farmers willingness to embrace and adopt the recommended measures The Guide holds in evidence that farmers are often constrained by available resources to improve their practices in terms of budget inputs or labour In order to take these issues into account the recommendations are limited on practical measures which can be followed by farmers without requiring additional resources

Field guide to improve crop water productivity in small-scale agriculture Food and Agriculture Organization of the United Nations ,2020-04-01 By 2050 the world's population will reach 9.1 billion which requires an increase of food production by 70 percent compared to 2005. FAO 2018. Nearly all the increase will occur in developing countries where agriculture plays a major role to provide employment income and to improve food security. One of the major challenges of increasing food supply is the limited water resources. Agriculture as the driver of freshwater exploitation has therefore to be transformed into more resource efficient production. FAO 2003. The world's limited freshwater resources are potentially threatened by the expansion of agriculture. Increasing the potential output per amount of water used is an appropriate practice to improve production efficiency while protecting water resources. Therefore increasing the productivity of agricultural water use in a sustainable manner is essential to ultimately sustain the social and economic conditions of livelihoods. Crop water productivity has grown into one of the major approaches to cope with water scarcity and advance crop water relation. The number of conceptual frameworks and implications is ample but there is always a growing need to review the step by step approach beyond. In this Field guide practical pathways are presented to provide a comprehensive approach for assessing and improving crop water productivity in small scale agriculture. The Field guide draws lessons learned in three countries: Burkina Faso, Morocco and Uganda within the framework of FAO project Strengthening Agricultural Water Efficiency and Productivity at the African and Global Level funded by Swiss Agency for Development and Cooperation SDC.
