**Planet Plutonia** Manny Mamuscia, 2011-02-18 From my point of view as the author I would like for my readers to grasp the understanding that there is a Creator call It by whatever title you like and that everything in our world and the universes is that It s all about change So when change does come into your life accept it without fear and simply deal with it as it comes along We humans can make change a wonderful part of our lives without the anxiety coming in and controlling our lives So this is a story of our fears or wants change knowing Creator does exist as do other Beings which are aware of all the above said and know their duties to Creator and humanity and all of life that may exist that we are still unawara of as yet I would also like for my readers to know that we the peoples have all the powers to manifest whatever we desire in our lives and our world Earth But first we have to accept that the possibility exists and then we have to work on that aspect to manifest whatever we want in our individual life There is at the least one major rule in all of exsistence though Love is the strongest denominator which exists and that is what we the peoples must focus on becomming Beings of love which means do unto others better than we desire for our individual selfs This is a fantasy story of truth and fantasy mixed together to elicit what Creator desired me to evok in all humanity This must be read from beggining to the end to to not miss some important part of the story Enjoy and make the changes that you know need be made for your life and those around you to become better than could be hoped Aloha

**The Gulf of California** Richard C. Brusca, 2010-04-15 Few places in the world can claim such a diversity of species as the Gulf of California Sea of Cortez with its 6 000 recorded animal species estimated to be half the number actually living in its waters So rich are the Gulf s water that over a half million tons of seafood are taken from them annually and this figure does not count the wasted by catch which would triple or quadruple that tonnage This timely book provides a benchmark for understanding the Gulf s extraordinary diversity how it is threatened and in what ways it is or should be protected In spite of its dazzling richness most of the Gulf s coastline now harbors but a pale shadow of the diversity that existed just a half century ago Recommendations based on sound careful science must guide Mexico in moving forward to protect the Gulf of California This edited volume contains contributions by twenty four Gulf of California experts from both sides of the U S Mexico border From the origins of the Gulf to its physical and chemical characteristics from urgently needed conservation alternatives for fisheries and the entire Gulf ecosystem to information about its invertebrates fishes cetaceans and sea turtles this thought provoking book provides new insights and clear paths to achieve sustainable use solidly based on robust science The interdisciplinary international cooperation involved in creating this much needed collection provides a model for achieving success in answering critically important questions about a precious but rapidly disappearing ecological treasure
