Islamic Arts and Crafts Marcus Milwright, 2017-02-03 Islamic art is justly famed for its technological sophistication, varied approaches to ornament and innovative employment of the written word. But what do we know about the skilled artisans who spent their lives designing and creating the paintings, objects and buildings that are so admired today? This anthology of written sources dating from the seventh to the twentieth centuries explores numerous aspects of the crafts of the Middle East, from the processing of raw materials to the manufacture of finished artefacts. You will learn about the legal and ethical dimensions of the arts and crafts, the organisation of labour in urban and rural contexts, the everyday lives of artisans, the gendered dimensions of making things and the impact of industrialisation upon traditional methods of manufacture. Each chapter begins with an introduction providing a wider context for the primary sources. There are also suggestions for further reading.

The Historiography of Persian Architecture Mohammad Gharipour, 2015-08-27 Historiography is the study of the methodology of writing history, the development of the discipline of history and the changing interpretations of historical events in the works of individual historians. Exploring the historiography of Persian art and architecture requires a closer look at a diverse range of sources, including chronicles, historical accounts, travelogues and material evidence coming from archaeological excavations. The Historiography of Persian Architecture highlights the political, cultural and intellectual contexts that lie behind the written history of Persian architecture in the twentieth century, presenting a series of investigations on issues related to historiography. This book addresses the challenges, complexities and contradictions regarding historical and geographical diversity of Persian architecture, including issues lacking in the 20th-century historiography of Iran and neighbouring countries. This book not only illustrates different trends in Persian architecture but also clarifies changing notions of research in this field. Aiming to introduce new tools of analysis, the book offers fresh insights into the discipline supported by historical documents, archaeological data, treatises and visual materials. It brings together well-established and emerging scholars from a broad range of academic spheres in order to question and challenge pre-existing historiographical frameworks, particularly through specific case studies. Overall, it provides a valuable contribution to the study of Persian architecture, simultaneously revisiting past literature and advancing new approaches. This book would be of interest to students and scholars of Middle
