Coonan, Catherin A.

Schwemm, David K. Garcelon, 2010-07-22 Native only to the California Channel Islands the island fox is the smallest canid in North America Populations on four of the islands were threatened to extinction in the 1990s due to human mediated predation and disease This is the first account of the natural history and ecology of the island fox illustrating both the vulnerability of island ecosystems and the efficacy of cooperative conservation measures It explains in detail the intense conservation actions required to recover fox populations such as captive breeding and reintroduction and large scale ecosystem manipulation These actions were successful due in large part to extraordinary collaboration among the scientists managers and public advocates involved in the recovery effort The book also examines the role of some aspects of island fox biology characteristic of the island syndrome in facilitating their recovery including high productivity and an apparent adaptation to periodic genetic bottlenecks **Integrated Population Biology and Modeling Part B**, 2019-02-05

*Integrated Population Biology and Modeling Part B* Volume 40 offers very delicately complex and precise realities of quantifying modern and traditional methods of understanding populations and population dynamics with this updated release

focusing on Prey predator animal models Back projections Evolutionary Biology computations Population biology of collective behavior and bio patchiness Collective behavior Population biology through data science Mathematical modeling of multi species mutualism new insights remaining challenges and applications to ecology Population Dynamics of Manipur Stochastic Processes and Population Dynamics Models The Mechanisms for Extinction Persistence and Resonance Theories of Stationary Populations and association with life lived and life left and more Studies human and animal models that are studied both separately and throughout chapters Presents a comprehensive and timely update on integrated population biology

**Ecology of North America** Brian R. Chapman, Eric G. Bolen, 2015-04-09 North America contains an incredibly diverse array of natural environments each supporting unique systems of plant and animal life These systems the largest of which are biomes form intricate webs of life that have taken millennia to evolve This richly illustrated book introduces readers to this extraordinary array of natural communities and their subtle biological and geological interactions Completely revised and updated throughout the second edition of this successful text takes a qualitative intuitive approach to the subject beginning with an overview of essential ecological terms and concepts such as competitive exclusion taxa niches and succession It then goes on to describe the major biomes and communities that characterize the rich biota of the continent starting with the Tundra and continuing with Boreal Forest Deciduous Forest Grasslands Deserts Montane Forests and Temperature Rain Forest among others Coastal environments including the Laguna Madre seagrasses Chesapeake Bay and barrier islands appear in a new chapter Additionally the book covers many unique features such as pitcher plant bogs muskeg the polar ice cap the cloud forests of Mexico and the LaBrea tar pits Infoboxes have been added these include biographies of historical figures who provided significant contributions to the development of ecology unique circumstances such as frogs and insects that survive freezing and conservation issues such as those concerning puffins and island foxes Throughout the text ecological concepts are worked into the text these include biogeography competitive exclusion succession soil formation and the mechanics of natural selection Ecology of North America 2e is an ideal first text for students interested in natural resources environmental science and biology and it is a useful and attractive addition to the library of anyone interested in understanding and protecting the natural environment

*Conservation of Wildlife Populations* L. Scott Mills, 2012-12-17 Population ecology has matured to a sophisticated science with astonishing potential for contributing solutions to wildlife conservation and management challenges And yet much of the applied power of wildlife population ecology remains untapped because its broad sweep across disparate subfields has been isolated in specialized texts In this book L Scott Mills covers the full spectrum of applied wildlife population ecology including genomic tools for non invasive genetic sampling predation population projections climate change and invasive species harvest modeling viability analysis focal species concepts and analyses of connectivity in fragmented landscapes With a readable style analytical rigor and hundreds of examples drawn from around the world Conservation of Wildlife Populations 2nd ed provides the conceptual

basis for applying population ecology to wildlife conservation decision making Although targeting primarily undergraduates and beginning graduate students with some basic training in basic ecology and statistics in majors that could include wildlife biology conservation biology ecology environmental studies and biology the book will also be useful for practitioners in the field who want to find in one place and with plenty of applied examples the latest advances in the genetic and demographic aspects of population ecology Additional resources for this book can be found at [www.wiley.com/go/mills\\_wildlifepopulations](http://www.wiley.com/go/mills_wildlifepopulations)

*Federal Register Index*, 2010      **Illinois' Annual Comprehensive Housing Plan**, 2010      *The Biology and Conservation of Australasian Bats* Bradley Law, Peggy Eby, Lindy Lumsden, Daniel Lunney, 2011 This book the Biology and Conservation of Australasian Bats follows from the successful 3 day forum of the same name held in April 2007 at the Australian Museum The forum was organised jointly by the Royal Zoological Society of NSW and the Australasian Bat Society

*Federal Register*, 2010      *Fishing for Human Perceptions in Coastal and Island Marine Resource Use Systems, 2nd Edition* Annette Breckwoldt, Wen-Cheng Wang, Hans von Storch, Beate M. W. Ratter, 2019-06-07 Human perceptions decision making and pro environmental behaviour are closely connected This Research Topic focuses on bringing together perceptions and behaviour for sustainable coastal and island marine resource use systems Management and governance of large and small scale coastal marine resource use systems function in highly complex social and ecological environments which are culturally embedded economically interest led and politically biased Management processes therefore have to integrate multiple perspectives as well as perception driven standpoints on the individual as well as the decision makers levels Consequently the analysis of perceptions has developed not only as part of philosophy and psychology but also of environmental science anthropology and human geography It encompasses intuitions values attitudes thoughts mind sets place attachments and sense of place All of these influence human behavior and action and are collected or are available within the respective marine resource use system which may support the livelihood of a large part of the local population Management and governance are not only about mediating between resource use conflicts or establishing marine protected areas they deal with people and their ideas and perceptions Understanding the related decision making processes on multiple scales and levels hence means much more than economically assessing the available marine resources or existing threats to the associated system Over the past decade there has been a growing inter and transdisciplinary international community becoming interested in research which integrates perceptions of coastal and inland residents local and regional stakeholder groups as well as resource and environmental managers and decision makers By acknowledging the importance of the individual perspective and interest led personal views it became obvious how valuable and important these sources of information are for coastal research An increase of research effort spent on the link between perceptions and behaviour in marine resource use systems is thus both timely and needed By offering a diversity of inspiring and comprehensive contributions on the link between perceptions and behaviour this Research Topic aspires to critically enlighten the discourse

and applicability of such research for finding sustainable locally identified anchored and integrated marine resource use pathways

**The Governance of Rangelands** Pedro M. Herrera,Jonathan Davies,Pablo Manzano Baena,2014-10-10 Rangelands are large natural landscapes that can include grasslands shrublands savannahs and woodlands They are greatly influenced by and often dependent on the action of herbivores In the majority of rangelands the dominant herbivores are found in domestic herds that are managed by mobile pastoralists Most pastoralists manage their rangelands communally benefitting from the greater flexibility and seasonal resource access that common property regimes can offer As this book shows this creates a major challenge for governance and institutions This work improves our understanding of the importance of governance how it can be strengthened and the principles that underpin good governance in order to prevent degradation of rangelands and ensure

their sustainability It describes the nature of governance at different levels community governance state governance international governance and the unique features of rangelands that demand collective action issues of scale ecological disequilibrium and seasonality A series of country case studies is presented drawn from a wide spectrum of examples from Africa the Middle East Central Asia Europe and North America These provide contrasting lessons which are summarised to promote improved governance of rangelands and pastoralist livelihoods **Frontiers in Conservation Science -**
