

Textiles — Standard atmospheres for conditioning and testing

1 SCOPE AND FIELD OF APPLICATION

This International Standard defines the characteristics and use of standard atmospheres for conditioning and for determining the physical and mechanical properties of textiles.

2 BASIC DEFINITIONS

2.1 relative humidity : The ratio of the actual pressure of the water vapour in the atmosphere to the saturation vapour pressure at the same temperature. The ratio is usually expressed as a percentage.

2.2 standard temperate atmosphere : An atmosphere which has a relative humidity of 65 % and a temperature of 20 °C.

2.2.1 standard temperate atmosphere for testing : An atmosphere which has a relative humidity of 65 ± 2 % and a temperature of 20 ± 2 °C.

2.3 standard tropical atmosphere : An atmosphere which has a relative humidity of 65 % and a temperature of 27 °C.

2.3.1 standard tropical atmosphere for testing : An atmosphere which has a relative humidity of 65 ± 2 % and a temperature of 27 ± 2 °C.

NOTE — The adjectives "temperate" and "tropical" as used in this International Standard have been chosen for the limited use of the textile industry.

3 PRE-CONDITIONING

Before conditioning a textile, pre-conditioning may be required. If so, the textile shall be brought approximately

to equilibrium in an atmosphere having a relative humidity of between 10 and 25 % and a temperature not exceeding 50 °C.

These conditions may be obtained by heating air at 65 % relative humidity and 20 °C (the standard temperate atmosphere) to a temperature of 50 °C, or by heating air at 65 % relative humidity and 27 °C (the standard tropical atmosphere) to a temperature up to 50 °C.

4 CONDITIONING

Before a textile is tested to determine a physical or mechanical property, it shall be conditioned by placing it in the standard temperate atmosphere for testing, in such a way that the air flows freely through the textile, and keeping it there for the time required to bring it into equilibrium with the atmosphere.

Unless otherwise specified in the method of test, the textile should be considered to be in equilibrium when successive weighings, at intervals of 2 h, of the textile materials freely exposed to the moving air show no progressive change in mass greater than 0,25 %.

In tropical or sub-tropical countries, the standard tropical atmosphere for testing may be used.

5 TESTING

Except for special cases (for example wet tests), physical and mechanical tests of textiles are carried out in the conditioned state in the standard temperate atmosphere for testing. In tropical and sub-tropical countries, however, the standard tropical atmosphere for testing may be used.
