A Manual for the Chemical Analysis of Metals , Quality Assurance in Analytical Chemistry Bernd W. Wenclawiak, Michael Koch, Evsevios Hadjicostas, 2010-08-05 knowledge This material provided has been collected from different sources One important source is the material available from EURACHEM Eurachem is a network of organisations in Europe having the objective of establishing a system for the international traceability of chemical measurements and the promotion of good quality practices It provides a forum for the discussion of common problems and for developing an informed and considered approach to both technical and policy issues It provides a focus for analytical chemistry and quality related issues in Europe You can find more information about EURACHEM on the internet via Eurachem A Focus for Analytical Chemistry in Europe <http://www.eurachem.org> In particular the site Guides and Documents contains a number of different guides which might help you to set up a quality system in your laboratory The importance of quality assurance in analytical chemistry can best be described by the triangles depicted in Figs 1 and 2 Quality is checked by testing and testing guarantees good quality Both contribute to progress in QA product control and quality and thus to establishing a market share Market success depends on quality price and flexibility All three of them are interconnected Before you can analyse anything the sample must be taken by someone This must be of major concern to any analytical chemist There is no accurate analysis without proper sampling For correct sampling you need a clear problem definition There is no correct sampling without a clear problem definition

Laboratory Techniques in Thrombosis — a Manual J. Jespersen, R.M. Bertina, F. Haverkate, 2013-12-01 The first edition of this manual appeared in 1992 and was entitled ECAT Assay Procedures It was the result of a unique cooperation between experts brought together by the European Concerted Action on Thrombosis and Disabilities ECAT The Concerted Action was at that time under the auspices of the Commission of the European Union The second edition like the first edition deals with diagnostic tests within the field

of thrombosis However the second edition has a broader scope because it is no longer limited by the frontiers of ECAT Experts all over the world in and outside ECAT have contributed to this edition The editors are very grateful for their contributions The need for a new edition is obvious Since 1992 new assays have been introduced for research diagnosis and therapy of thrombosis for other assays improvements have been suggested while a few others became redundant The editors waived the radioimmunoassays of thromboglobulin and platelet factor 4 due to the fact that the kits required for these assays are rarely or no longer available Also the PAI 1 activity assay was waived as it is liable to many inconsistencies and to large variations A list of names and addresses of manufacturers marketing the kits and reagents has been compiled together with a list of the recommended nomenclature of quantities in thrombosis and haemostasis in order to facilitate the use of the updated version These lists have been carefully compiled by Johannes J Sidelmann PhD Department of Clinical Biochemistry in Esbjerg Denmark
