Ophthalmic Lasers
Charles M. Wormington, 2003 Reflecting the recent fundamental revolution in the field of ophthalmic lasers this book responds to the need for a comprehensive practical understanding of clinical ophthalmic lasers and their diagnostic and therapeutic uses It emphasizes the important new diagnostic uses of lasers for both the anterior and posterior segments and the therapeutic uses for the anterior segment It details how lasers are used to treat a variety of ocular conditions such as cataract and glaucoma addressing the optometrist's role in laser applications such as referrals and post procedure complication management

Physics of Optoelectronics Michael A. Parker, 2018-10-03 Physics of Optoelectronics focuses on the properties of optical fields and their interaction with matter Understanding that lasers LEDs and photodetectors clearly exemplify this interaction the author begins with an introduction to lasers LEDs and the rate equations then describes the emission and detection processes The book summarizes and reviews the mathematical background of the quantum theory embodied in the Hilbert space These concepts highlight the abstract form of the linear algebra for vectors and operators supplying the pictures that make the subject more intuitive A chapter on dynamics includes a brief review of the formalism for discrete sets of particles and continuous media It also covers the quantum theory necessary for the study of optical fields transitions and semiconductor gain This volume supplements the description of lasers and LEDs by examining the fundamental nature of the light that these devices produce It includes an analysis of quantized electromagnetic fields and illustrates inherent quantum noise in terms of Poisson and sub Poisson statistics It explains matter light interaction in terms of time dependent perturbation theory and Fermi's golden rule and concludes with a detailed discussion of semiconductor emitters and detectors
