Semantic Web Christopher J. O. Baker, Kei-Hoi Cheung, 2007-04-14 The rapid growth of the Web has led to the proliferation of information sources and content accessible via the Internet While improvements in hardware capabilities continue to help the speed and the flow of information across networked computers there remains a major problem for the human user to keep up with the rapid expansion of the Web information space Although there is plenty of room for computers to help humans to discover navigate and integrate information in this vast information space the way the information is currently represented and structured through the Web is not easily readable to computers To address this issue the Semantic Web has emerged It envisions a new information infrastructure that enables computers to better address the information needs of human users To realize the Semantic Web vision a number of standard technologies have been developed These include the Uniform Resource Identifiers URI for identifying objects in the Web space as well as Resource Description Framework RDF and Web Ontology Language OWL for encoding knowledge in the form of standard machine readable ontologies The goal is to migrate from the syntactic Web of documents to the semantic Web of ontologies The leading organization for facilitating developing and promoting these Web based standards is the World Wide Web Consortium W3C <http://www.w3.org>

Couto, 2019-06-10 This open access book is a step by step introduction on how shell scripting can help solve many of the data processing tasks that Health and Life specialists face everyday with minimal software dependencies The examples presented in the book show how simple command line tools can be used and combined to retrieve data and text from web resources to filter and mine literature and to explore the semantics encoded in biomedical ontologies To store data this book relies on open standard text file formats such as TSV CSV XML and OWL that can be open by any text editor or spreadsheet application The first two chapters Introduction and Resources provide a brief introduction to the shell scripting and describe popular data resources in Health and Life Sciences The third chapter Data Retrieval starts by introducing a common data processing task that involves multiple data resources Then this chapter explains how to automate each step of that task by introducing the required commands line tools one by one The fourth chapter Text Processing shows how to filter and analyze text by using simple string matching techniques and regular expressions The last chapter Semantic Processing shows how XPath queries and shell scripting is able to process complex data such as the graphs used to specify ontologies Besides being almost immutable

for more than four decades and being available in most of our personal computers shell scripting is relatively easy to learn by Health and Life specialists as a sequence of independent commands Comprehending them is like conducting a new laboratory protocol by testing and understanding its procedural steps and variables and combining their intermediate results Thus this book is particularly relevant to Health and Life specialists or students that want to easily learn how to process data and text and which in return may facilitate and inspire them to acquire deeper bioinformatics skills in the future
