Is Science Multicultural? Sandra Harding, 1998-02-22 Explores what the last few decades of European American feminist and postcolonial science and technology studies can learn from each other This book proposes new directions for thinking about objectivity method and reflexivity in light of the new understandings developed in the post World War II world

*Is Science Multicultural?* Sandra G. Harding, 1998 Sandra Harding explores what practitioners of Euro American feminist and postcolonial science and technology studies can learn from each other She discusses the array of postcolonial science studies that have flourished over the last three decades and probes their implications for northern science All three science studies strains have developed in the context of post World War II science and technology projects They illustrate how technoscientific projects mean different things to different groups The meaning attached by the culture of the West may not be shared or may be diametrically opposite in other world cultures All however would agree that scientific projects modern science included are local knowledge systems Harding argues that the interests and discursive resources that the various science studies groups bring to their projects and the ways that they organize the production of their kind of science studies are also culturally local How is this cultural situatedness of knowledge both an invaluable resource as well as a limitation on the advance of knowledge What are the distinctive resources that the feminist and postcolonial science theorists offer in thinking about the history of modern science Carefully balancing poststructuralist and conventional epistemological resources this study proposes new directions for thinking about objectivity method and reflexivity in the new and future world of science and technology

**Meta-Philosophical Reflection on Feminist Philosophies of Science** Maria Cristina Amoretti, Nicola Vassallo, 2015-12-21 This volume offers a meta philosophical reflection on feminist philosophies of science It emphasizes and discusses both the connections and differences between traditional philosophies of science and feminist philosophies of science The collection systematically analyses feminist contributions to the various philosophies of specific sciences Each chapter is devoted to a specific area of philosophy of science general philosophy of science philosophy of biology philosophy of climate sciences philosophy of cognitive sciences and neurosciences philosophy of economics philosophy of history and archaeology philosophy of logic and mathematics philosophy of medicine philosophy of psychology philosophy of physics and philosophy of social sciences Since some of these areas have so far rarely been addressed by feminist philosophers this new collection provides new angles and stimulates the debate on pivotal issues that are part and parcel of both traditional philosophies of science and feminist philosophies of science Using a range of different methodologies and styles the essays all show great clarity in both arguments and contents

**Feminist Science Fiction and Feminist Epistemology** Ritchie Calvin, 2016-09-11 This book argues that feminist science fiction shares the same concerns as feminist epistemology challenges to the sex of the knower the valuation of the abstract over the concrete the dismissal of the physical the focus on rationality and reason the devaluation of embodied knowledge and the containment of

some bodies Ritch Calvin argues that feminist science fiction asks questions of epistemology because those questions are central to making claims of subjectivity and identity Calvin reveals how women who have historically been marginal to the deliberations of philosophy and science have made significant contributions to the reconsideration and reformulation of the epistemological models of the world and the individuals in it

**Toward a Global Science** Susantha Goonatilake, 1998

Asian science such as mathematics Chinese printing gunpowder and the compass all contributed to the development of European science During the last few centuries however scientific contributions with Asian roots have diminished and been marginalized and deligitimised Yet the center of the world economy today is shifting to Asia with shifts in science and technology bound to follow Toward a Global Science is driven by the proposition that pre Renaissance acquisition of Asian knowledge did not exhaust Asian civilization s potential contribution There are many useful elements to modern science still lying hidden in Asian civilizational stores waiting to be mined The author gives details of recent contributions from South Asian medicine mathematics and psychology and explores how South Asian inputs can be useful in navigating the philosophical and ethical problems raised by two dominant technologies of the future namely biotechnology and information technology As an illustrative example it describes how a fruitful marriage of one technology virtual reality with South Asian philosophy can enliven both the technology as well as philosophy It also examines how Asian positions could be used to feed some key contemporary philosophical discussions on science Using a model of the civilizational construction of science the book views science without Eurocentric blinders It documents how science was built initially by transfers from non European civilizations and why the given historiography of science has to be rethought Throughout the book the author gives examples of parallels and antecedents between East and West in science and estimates the potential reservoir of Asian knowledge in each field The book also deals with the many knotty problems in recovering science from past traditions The author distinguishes between his secular efforts from religious and other attempts that claim the equivalence of all knowledge systems

**The Epistemology of Experts** Peter Brössel, Anna-Maria Asunta Eder, Thomas Grundmann, 2025-08-28

This volume presents new research on the epistemology of experts It features original essays from leading epistemologists on this timely topic Modern societies benefit significantly from a certain kind of epistemic division of labor they outsource much of their epistemic work to well trained cognitive experts However due to their degree of specialization cognitive sophistication and highly privileged status cognitive experts tend to become alienated from laypeople This leads to what one may call the paradox of experts as experts become more competent specialized and sophisticated the harder it will be for laypeople to identify and trust experts The chapters in this volume explore the epistemology of expert judgment across several core themes and crucial questions Analysis of Experts What does it take to be a cognitive expert Epistemic Authority How much should we concede experts over laypeople The Social Roles of Experts What role do experts play in society and what role should they play Challenges What problems arise from experts epistemic authority and societal role The Epistemology of

multicultural and postcolonial studies propose ways to reconceptualize the sciences in the global social order At issue here are not only social justice and environmental issues but also the accuracy and comprehensiveness of our understandings of natural and social worlds The inadvertent complicity of the sciences with antidemocratic projects obscures natural and social realities and thus blocks the growth of scientific knowledge Scientists policy makers social justice movements and the consumers of scientific products that is the rest of us can work together and separately to improve this situation Gender and Boyle's Law of Gases Elizabeth Potter,2001-04-22 Gender and Boyle s Law of Gases Elizabeth Potter Re examines the assumptions and experimental evidence behind Boyle s Law Boyle s Law which describes the relation between the pressure and volume of a gas was worked out by Robert Boyle in the mid 1600s His experiments are still considered examples of good scientific work and continue to be studied along with their historical and intellectual contexts by philosophers historians and sociologists Now there is controversy over whether Boyle s work was based only on experimental evidence or whether it was influenced by the politics and religious controversies of the time including especially class and gender politics Elizabeth Potter argues that even good science is sometimes influenced by such issues and she shows that the work leading to the Gas Law while certainly based on physical evidence was also shaped by class and gendered considerations At issue were two descriptions of nature each supporting radically different visions of class and gender arrangements Boyle s Law rested on mechanistic principles but Potter shows us an alternative law based on hylozoic principles the belief that all matter is animated whose adherents challenged social stability and the status quo in 17th century England Elizabeth Potter Alice Andrews Quigley Professor of Women s Studies at Mills College is co editor of *Feminist Epistemologies* and author of numerous articles on feminist epistemology and feminist philosophy of science *Race Gender and Science* Anne Fausto Sterling general editor June 2001 232 pages 5 figs 6 x 9 index cloth 0 253 33916 2 34 95 L 26 50 paper 0 253 21455 6 17 95 s 13 95 *Companion to Feminist Studies* Nancy A. Sharp, 2012-09-05 Revisiting the racial origins of the conflict between civilization and savagery in twentieth century America The atomic age brought the Bomb and spawned stories of nuclear apocalypse to remind us of impending doom As Patrick Sharp reveals those stories had their origins well before Hiroshima reaching back to Charles Darwin and America s frontier In *Savage Perils* Sharp examines the racial underpinnings of American culture from the early industrial age to the Cold War He explores the influence of Darwinism frontier nostalgia and literary modernism on the history and representations of nuclear weaponry Taking into account such factors as anthropological race theory and Asian immigration he charts the origins of a worldview that continues to shape our culture and politics Sharp dissects Darwin s arguments regarding the struggle between civilization and savagery theories that fueled future war stories ending in Anglo dominance in Britain and influenced Turnerian visions of the frontier in America Citing George W Bush s Axis of Evil Sharp argues that many Americans still believe in the racially charged opposition between civilization and savagery and consider the possibility of nonwhite savages gaining control of technology the biggest threat in the war on terror His insightful book shows us that this conflict is but the latest installment in an ongoing saga that has been at the heart of American identity from the beginning and that understanding it is essential if we are to eradicate racist mythologies from American life *Darwinian Feminism and Early Science Fiction* Patrick B Sharp, 2018-03-28 This book is the first detailed scholarly examination of women s SF in the early magazine period before the Second World War This is a sustained study of women writing in the genre before World War II something that has never been done in a monograph The author shows how women such as Margaret Cavendish and Mary Shelley drew critical attention to the colonial mindset of scientific masculinity which was attached to scientific institutions that excluded women

**The Philosophical I** George Yancy,2002-11-19 Philosophy is shaped by life and life is shaped by philosophy This is reflected in The Philosophical I a collection of 16 autobiographical essays by prominent philosophers Candid and philosophically insightful these personal narratives critically call into question the belief that philosophy should be kept separate from the personal experience of philosophers Each contributor traces the fundamental influences both philosophical and otherwise that have shaped his or her identity In this postmodern world the self is often viewed as irreparably fragmented and fractured but the reflections in this volume point to a self that is a continuous though dynamic storyline What shines through in each of these essays is that philosophy is a profoundly personal adventure *Women, Science, and Technology* Mary Wyer,Mary Barbercheck,Donna Cookmeyer,Hatice Ozturk,Marta Wayne,2013-09-11
