Enzyme Mechanism from Isotope Effects Paul F. Cook, 1991-09-20 Isotope effects have become one of the most powerful tools available to the enzymologist for probing enzymic mechanisms *Enzyme Mechanism from Isotope Effects* presents the basic theory underlying isotope effects including the latest findings on proton tunneling and coupled atomic motions Specific theoretical applications are emphasized in regard to the types of information that can be obtained using isotope effects The book also examines recent theoretical treatments of the product dependence of deuterium isotope effects multiple isotope effects and isotope effects on intermediate partitioning Other topics include a complete discussion of methods for measuring isotope effects including a detailed description of the use of the isotope ratio mass spectrometer to obtain isotope effects and a review of the literature regarding mechanistic information obtained from isotope effects for individual classes of enzyme catalyzed reactions *Enzyme Mechanism from Isotope Effects* is an excellent reference source for investigators using isotope effects in their research The book is also valuable for reference libraries and instructors teaching courses in enzyme mechanism

Enzyme-Catalyzed Reactions, Revised Edition Richard B. Silverman, 2002-02-28 *The Organic Chemistry of Enzyme Catalyzed Reactions* is not a book on enzymes but rather a book on the general mechanisms involved in chemical reactions involving enzymes An enzyme is a protein molecule in a plant or animal that causes specific reactions without itself being permanently altered or destroyed This is a revised edition of a very successful book which appeals to both academic and industrial markets Illustrates the organic mechanism associated with each enzyme catalyzed reaction Makes the connection

between organic reaction mechanisms and enzyme mechanisms Compiles the latest information about molecular mechanisms of enzyme reactions Accompanied by clearly drawn structures schemes and figures Includes an extensive bibliography on enzyme mechanisms covering the last 30 years Explains how enzymes can accelerate the rates of chemical reactions with high specificity Provides approaches to the design of inhibitors of enzyme catalyzed reactions Categorizes the cofactors that are appropriate for catalyzing different classes of reactions Shows how chemical enzyme models are used for mechanistic studies Describes catalytic antibody design and mechanism Includes problem sets and solutions for each chapter Written in an informal and didactic style

Transition States of Biochemical Processes R. Gandour, 2013-06-29 The transItIOn state theory has been from the point of its inception the most influential principle in the development of our knowledge of reaction mechanisms in solution It is natural that as the field of biochemical dynamics has achieved new levels of refinement its students have increasingly adopted the concepts and methods of transition state theory Indeed every dynamical problem of biochemistry finds its most elegant and economical statement in the terms of this theory Enzyme catalytic power for example derives from

the interaction of enzyme and substrate structures in the transition state so that an understanding of this power must grow from a knowledge of these structures and interactions Similarly transition state interactions and the way in which they change as protein structure is altered constitute the pivotal feature upon which molecular evolution must turn The complete coupled dynamical system of the organism incorporating the transport of matter and energy as well as local chemical processes will eventually have to yield to a description of its component transition state structures and their energetic response characteristics even if the form of the description goes beyond present day transition state theory Finally the importance of biochemical effectors in medicine and agriculture carries the subject into the world of practical affairs in the use of transition state information for the construction of ultra potent biological agents

Peroxidases in Chemistry and Biology Johannes Everse, Matthew B. Grisham, 1990-10-24 The second of two relatively independent volumes on the chemistry and biology of peroxidases Volumes 2 covers the peroxidases isolated from plants and microorganisms and includes detailed discussions of some of the unique reactions catalyzed by these enzymes Volume one covered the peroxidases isolated from animal sources as well as the pseudo peroxidase activity of prostaglandin H synthase and of myoglobin and hemoglobin Acidic paper Annotation copyrighted by Book News Inc Portland OR *Structural and Mechanistic Enzymology* Christo Christov, Tatyana Karabancheva-Christova, 2012-05-29 Other volumes cataloged as a serial see LCCN 2009237250
