High-Energy Astrophysics Research Enabled By The Probe-Class Mission Concept HEX-P Gabriele Ponti,Murray Brightman,Esra Bulbul , Renee Ludlam,Daniel Stern,Javier A. García,2025-06-02 The Astro 2020 Decadal report Pathways to Discovery in Astronomy and Astrophysics for the 2020s identified the need for a new class of mission for the next decade that fills the gap between a Mid sized Explorer MIDEX and Flagship Large mission The report specifically recommends that a

cadence of one probe mission per decade with a cost cap of 1.5 billion balances scientific scope with timeliness NASA has followed this recommendation and opened a call for Astrophysics Probe Explorer APEX proposals restricted to either a far infrared or an X ray mission due in Fall 2023 with a planned launch date in no later than 2032 In response to this call the High Energy X ray Probe HEX P concept has been developed as a partnership between NASA's Jet Propulsion Laboratory JPL the California Institute of Technology Caltech and the NASA Goddard Space Flight Center GSFC with international partnership from the Italian Space Agency ASI Italy the German Space Agency DLR and the Max Planck Institute for Extraterrestrial Physics MPE Germany HEX P is a mission concept that offers sensitive broad band coverage from soft to hard X rays 0.2–80 keV with an exceptional combination of spectral timing and angular capabilities It features two high energy telescopes HETs that focus hard X rays and one low energy telescope LET that focuses lower energy X rays building upon the heritage of previous successful missions such as XMM Newton and NuSTAR With this leap in observational capability HEX P will be capable of addressing fundamental questions about the extreme environments around black holes and neutron stars map the growth of supermassive black holes and quantify the effect they have on their environments HEX P will resolve the hard X ray emission from dense regions of our Galaxy to understand the high energy source populations and investigate dark matter candidate particles through their decay channel signatures In this Frontiers Research Topic we present a collection of papers which delve into some of the most exciting scientific questions that can be addressed with a mission like HEX P The papers have been prepared by members of the HEX P collaboration which is organized into four main scientific pillars Black Hole Growth Accretion Power Stellar Evolution Time Domain and Multi Messenger Astronomy The individual papers cover a range of topics including The cosmic X ray background Seyfert galaxies Compton thick active galaxies and blazars Black hole binaries neutron stars magnetars ultraluminous X ray sources and tidal disruption events The physics of the X ray corona X ray populations in nearby galaxies Supernova remnants pulsar wind nebulae and nuclear astrophysics Galactic PeVatrons star clusters superbubbles microquasar jets and gamma ray binaries The Galactic Center Supermassive black spin measurements and dual active galaxies Pulsar Timing electromagnetic counterparts of gravitational wave sources and transient phenomena The main goal of this Research Topic is to present detailed modeling and simulations for a range of HEX P science cases in order to demonstrate the capabilities of HEX P in serving the astrophysics community in the next decade The members of the HEX P mission are welcome to present Original Research papers as well as any other kind of article types that fit their manuscript Please have a look at [here](#) to choose the appropriate article type to submit to this collection This Research Topic is organized by the researchers of the HEX P mission Authors and Guest Editors belong to the same consortium Furthermore Dr Daniel Stern and Dr Javier Garcia are the Principal Investigator and the Project Scientist of the mission respectively All manuscripts will be peer reviewed by researchers external to the collaboration

Thermochemistry in Materials Processing Gabriel Plascencia, David Jaramillo, 2017-02-28 This book provides the reader with some thermochemistry notes. The intention is to provide a simple easy to understand text which serves as a complimentary material to more complex books. It also provides students and those beginning in the field with several application examples used in different areas of materials processing. The book presents fully solved problems some quite often found in major metallurgical operations. The Engineer, 1877 **Soldiers**, 1974 **Astronomy from Wide-Field Imaging** H.T.

MacGillivray, E.B. Thomson, Barry M. Lasker, I. Neill Reid, David F. Malin, Richard M. West, Hilmar Lorenz, 2012-12-06 H T MacGILLIVRAY Royal Observatory Blackford Hill Edinburgh EH9 3HJ Scotland U K IAU Symposium No 161 on Astronomy from Wide Field Imaging held in Potsdam Germany during 23-27th August 1993 was the first conference organised by the recently formed Working Group of IAU Commission 9 on Wide Field Imaging. This Working Group was instigated during the XXIst meeting of the General Assembly of the International Astronomical Union in Buenos Aires in 1991 and represented a merging of the former formal IAU Working Group on Astronomical Photography and the informal Digitised Optical Sky Surveys Working Group. Dr Richard West was invited to be Chairperson and hence was given the daunting task of organising the Group from scratch. The very fact that the first conference after only two years was a major IAU Symposium says much about the determination and enthusiasm of Richard West to fulfilling the aims of the new Working Group. The siting of the conference in Potsdam in formerly East Germany provided an excellent opportunity to advantage from the political changes in Eastern Europe. Good access to the meeting was possible by scientists from Eastern European countries allowing exchange of information on the very important Wide Field facilities in both East and West, information on the rich archives of photographic plates that exist in both East and West and allowing discussions between scientists facing very similar problems in both East and West. **Engineering of Stem Cells** Ulrich Martin, 2009-10-15 I am very pleased to present this volume on engineering stem cells in *Advances in Biochemical Engineering and Biotechnology*. This volume stays abreast of recent developments in stem cell biology and the high expectations concerning the development of stem cell based regenerative therapies. Regenerative medicine is the focus of current biomedical research with unique challenges related to scientific, technical and ethical issues of stem cell research and the potential added value of connecting biomedicine with enabling technologies such as materials sciences, mechanical and nano engineering. Research activities in regenerative medicine include strategies in endogenous regeneration of injured or degenerated tissues by means of gene therapy or cell transplantation as well as complex approaches to replace or reconstruct lost or malformed tissue structures by applying tissue engineering approaches. In most cases the specified functional cell types of interest cannot be isolated from the diseased organ or expanded to a sufficient degree and various stem and progenitor cell types represent the only applicable cell source. In almost all cases stem cells have to be engineered, sometimes for functional improvement in many cases to produce large numbers of cells and frequently to achieve efficient and specific differentiation in the cell types of interest.

This book delves into Keep It Simple Science Hsc. Keep It Simple Science Hsc is a crucial topic that must be grasped by everyone, from students and scholars to the general public. The book will furnish comprehensive and in-depth insights into Keep It Simple Science Hsc, encompassing both the fundamentals and more intricate discussions.
