Practical Pharmaceutical Laboratory Automation Brian D. Bissett, 2003-05-23 Laboratory automation is an increasingly important part of the job description of many laboratory scientists. Although many laboratory scientists understand the methods and principles involved in automation, most lack the necessary engineering and programming skills needed to successfully automate or interface equipment in the lab. A step by step how to reference and guide. **Practical Pharmaceutical Laboratory Automation** explores the processes needed to automate the majority of tasks required in research today. The author discusses topics ranging from automated mathematical analysis to robotic automation of chemical processes to combinations of these and other processes. He presents a detailed discussion of high throughput screening and assay development and takes an in depth look at Visual Basic as the primary programming language used in laboratories. The text has a dedicated web site <http://www.pharmalabauto.com> that contains all the sample code and examples contained within the text as well as other information related to laboratory automation. Providing a starting point for tackling automation problems, **Practical Pharmaceutical Laboratory Automation** helps you develop a strategy for automation that gets consistent results.

High-Throughput Analysis Radislav A. Potyrailo, Eric J. Amis, 2012-12-06 This book edited by Potyrailo and Amis addresses a new paradigm shifting approach in the search for new materials Combinatorial Materials Science One way to consider such an approach is to imagine an adventurous chef who decides to look for new entrees by cooking food ingredients in many pots using different combinations in every pot and boiling steaming or frying them in various ways Although most of the pots will not have the tastiest food ever devised some recipes will taste intriguing and some eventually will lead to a discovery of a new fascinating cuisine Of course having a skilled chef design the combinatorial formulation will certainly be helpful in ensuring a successful outcome Similar to food each engineering material is a complex product of its chemical composition structure and processing Generally each of these components matters change one and you get another material Most of these new materials will be less good than ones we use now since existing materials have been refined with the extensive

work of scientists and engineers At the same time if one prepares diverse materials like our adventurous chef changing material composition processing conditions and time etc some of these materials will be superior to existing ones and a few might represent breakout technology *Robust Electronic Design Reference Book: no special title* John R.
