Toward a Spiritual Research Paradigm Jing Lin,Rebecca L. Oxford,Tom E. Culham,2016-07-01 Spirituality and spiritual experiences have been the bedrock of every civilization and together form one of the highest mechanisms for making sense of the world for billions of people Current research paradigms due to their limitation to empirical sensory psychologically or culturally constructed realities fail to provide a framework for exploring this essential area of human experience The development of a spiritual research paradigm will provide researchers from the social sciences and education the tools and abilities to systematically explore fundamental questions regarding human spiritual experiences and spiritual growth A spiritual research paradigm requires an ontology that considers all reality to be multidimensional interconnected and interdependent It requires an epistemology that integrates knowing from outer sources as well as inner contemplation acknowledging our integration of soul and spirit with the body and mind Three additional aspects are useful to a spiritual research paradigm axiology methodology and teleology An axiology concerns what is valued good and ethical A methodology is the appropriate approach to systematic inquiry A fifth and less frequently mentioned aspect is teleology an explanation of the goal or end telos to which new knowledge is applied such as gaining wisdom and truth touching the divine increasing inner peace exploring hidden dimensions or improving society This book takes the first step to develop such a research paradigm We draw from world spiritual traditions as well as scholarship that has arisen from contemplative practices We also attempt to build a bridge between science and spirituality Spiritual research is not necessarily opposed to scientific research in fact each can shed light on the other

AACN Protocols for Practice Suzanne M. Burns,2007 Care of Mechanically Ventilated Patients guides clinicians practice in the following categories airway management modes and methods of mechanical ventilation weaning sedation and neuromuscular blockade nutrition support and home care management of ventilator assisted patients Each protocol guides clinicians in the appropriate selection of patients use and application of management principles initial and ongoing monitoring discontinuation of therapies or interventions and selected aspects of quality control

[AACN Protocols for Practice: Noninvasive Monitoring, Second Edition](#) Burns,Editor: Suzanne M. Burns,2005-09-22 AACN Protocols for Practice Noninvasive Monitoring delineates the evidence for using devices for noninvasive patient monitoring of blood pressure heart rhythms pulse oximetry end tidal carbon dioxide and respiratory waveforms These protocols guide clinicians in the appropriate selection of patients for use of the device application of the device initial and ongoing monitoring device removal and selected aspects of quality control AACN Protocols for Practice are authoritative evidence based practice resources for use by clinicians educators and researchers Each series of protocols makes recommendations for the application practice and monitoring associated with a device procedure or practice These protocols are designed to promote evidence based practice by providing the latest patient care research findings in a format that is easy to understand and integrate into clinical practice The protocols can be used to guide care in a variety of clinical situations in acute care

progressive care or even in the home Each protocol is introduced by a case study which is followed by general information about the technology occupational hazards ethics considerations competency issues and practice recommendations Recommendations are rated according to the level of evidence that is available to support the statement Annotated bibliographies suggested readings and cross references provide guidance for learning more about the specific device or patient care system 2006 113 pages Towards the Future of Surgery Jacopo Martellucci, Francesca Dal Mas, 2024-02-24 The book provides an overview of the characteristics and skills both technical and soft needed to become the surgical leaders of tomorrow During the COVID pandemic the methodological weakness in accessing and disseminating information in has become evident this has fostered the digital development and has favoured the creation of networks and communities of individuals not only physicians or surgeons pointing the way to global knowledge sharing The development of the technological offer applied to surgery has been very rapid with the integration of minimally invasive and robotic surgery with artificial intelligence and computerization of decision making processes up to the extreme limit of space surgery However in the future of this discipline surgeons will no longer need to consider only improved access to knowledge and evolution of technology as a great challenge will be represented by the parallel development of non technical skills leadership communication team working and by the careful application of healthcare management principles to clinical practice Finally in the near future but already in the present it will be impossible to ignore the economic impact of high tech care and equity in access to care The book describes a journey which starts from the history of surgical education to cross the most relevant perspectives of present and future exploring new learning models the thousand applications of artificial intelligence and surgical technology to the space and back **Clinical Research Methods for Surgeons** David F. Penson, 2007-11-06 With his keen analytical mind and penchant for organization Charles Darwin would have made an excellent clinical investigator Unfortunately for surgery his early exposure at Edinburgh to the brutality of operations in 1825 convinced him to reject his father s plan for his career and pursue his interest in nature His subsequent observations of how environmental pressures shaped the development of new species provided the essential mechanism to explain evolution and the disappearance of those species that failed to adapt Today surgeons face the same reality as new technology progressive regulation by government and payers medico legal risks and public demands for proof of performance force changes in behavior that our predecessors never imagined We know that surgeons have always prided themselves on accurate documentation of their results including their complications and deaths but observational studies involving a single surgeon or institution have given way to demands for controlled interventional trials despite the inherent difficulty of studying surgical patients by randomized blinded techniques That is why this book is so timely and important In a logical and comprehensive approach the authors have assembled a group of experienced clinical scientists who can demonstrate the rich variety of techniques in epidemiology and statistics for reviewing existing publications structuring a clinical study and analyzing the resulting data **Handbook**
