Robotics, Vision and Control Peter Corke, 2023-05-09 This textbook provides a comprehensive but tutorial introduction to robotics, computer vision and control. It is written in a light but informative conversational style weaving text, figures, mathematics and lines of code into a narrative that covers robotics and computer vision separately and together as robotic vision. Over 1600 code examples show how complex problems can be decomposed and solved using just a few simple lines of code. This edition is based on Python and is accompanied by fully open source Python based Toolboxes for robotics and machine vision. The new Toolboxes enable the reader to easily bring the algorithmic concepts into practice and work with real non trivial problems on a broad range of computing platforms. For the beginning student the book makes the algorithms accessible; the Toolbox code can be read to gain understanding and the examples illustrate how it can be used. The code can also be the starting point for new work for practitioners, students or researchers by writing programs based on Toolbox functions or modifying the Toolbox code itself.

Food, Nutrition, and Diets at Net Zero. 10 years of Frontiers in Nutrition Johannes le Coutre, 2025-05-23 Over the second half of the 20th century many questions relating to food and nutrition science were considered to be nearly understood and beyond ensuring the balanced delivery of proteins, carbohydrates and fats no major discoveries were anticipated in this scientific field. Much of the technological advancements in the field were focused on food production and procurement at scale. Now about half a century later the domain of food and nutrition science technology is experiencing a renaissance unlike any other. We are not only discussing food and public health using narratives ranging from functional to superfoods but we are also engaging in conversations about planetary health and the role of foods as medicine among other topics. Furthermore we are beginning to realize the intricate interplay between food systems and our global

climate Our methods of procuring nutrition contribute to climate change and we are witnessing a significant increase in climate driven events that threaten our food security Ten years ago in collaboration with the team at Frontiers we founded Frontiers in Nutrition to provide a rigorous science based platform for the open access publication and exchange of findings within a fully integrated scope of discussing food and nutrition With this Research Topic we welcome the world s foremost influential and leading scientists to join us in celebrating our 10th anniversary and to contribute bold and visionary articles
