between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

The One Heinrich Päs, 2023-02-16 In *The One* particle physicist Heinrich Päs presents a bold

idea fundamentally everything in the universe is an aspect of one unified whole This idea called monism has a rich 3 000 year history Plato believed that all is one but monism was later rejected as irrational and suppressed as a heresy by the medieval Church Nevertheless monism persisted inspiring Enlightenment science and Romantic poetry P s shows how monism could inspire physics today how it could slice through the intellectual stagnation that has bogged down progress in modern physics and help science achieve the grand theory of everything that it has been chasing for decades Blending physics philosophy and the history of ideas The One is an epic mind expanding journey through millennia of human thought and into the nature of reality itself
