Chelliah, Willem J. de Reuse, 2010-10-06

predication Chris Lasse Däbritz,Josefina Budzisch,Rodolfo Basile,2025-09-29 Locative and existential predications are fundamental linguistic constructions that exhibit significant formal overlap while serving distinct communicative functions Locative clauses typically anchor a definite referent to a spatial context whereas existential clauses introduce new often indefinite referents into discourse Despite their central role in syntactic and typological research the cross linguistic diversity of these predications remains largely underexplored This collective volume originates from workshops held in 2023 at the Annual SLE Meeting in Athens and the International Conference on Historical Linguistics in Heidelberg It brings together in depth analyses of locative and existential predications across a wide range of languages drawing on diverse methodological and theoretical approaches Rather than imposing a single framework the volume deliberately allows for variation in how these constructions are defined and analyzed reflecting the complexity and diversity of linguistic structures A key theme of the book is the relationship between locative existential and possessive predication Many of the included studies highlight the formal and functional connections between these domains illustrating how different languages encode possession through structures that overlap with locative and existential constructions The volume also challenges conventional assumptions about structural distinctions between these predications showing that in many languages such boundaries are blurred or even nonexistent The introductory chapter reviews key findings from prior research and offers a refined typology of locative and existential predications It also highlights the major insights from the remaining chapters each of which provides a detailed empirical analysis of these constructions in one or several underdescribed languages The contributions address i the structural and functional properties of locative and existential clauses ii criteria for distinguishing these constructions in languages where formal differentiation is minimal iii their frequency and usage in natural discourse and iv grammaticalization pathways that link locative existential and possessive predication By integrating data from a broad range of languages and perspectives this volume advances our understanding of locative and existential predication and offers a foundation for future research in typology syntax and historical linguistics
