Shahid,Faisal K. Taha,Mahmoud A. Abdelfattah,2013-02-15

As the world s population continues to expand maintaining and indeed increasing agricultural productivity is more important than ever though it is also more difficult than ever in the face of changing weather patterns that in some cases are leading to aridity and desertification The absence of scientific soil inventories especially in arid areas leads to mistaken decisions about soil use that in the end reduce a region s capacity to feed its population or to guarantee a clean water supply Greater efficiency in soil use is possible when these resources are properly classified using international standards Focusing on arid regions this volume details soil classification from many countries It is only once this information is properly assimilated by policymakers it becomes a foundation for informed decisions in land use planning for rational and sustainable uses **Soil Erosion Issues in Agriculture** Danilo Godone,Silvia Stanchi,2011-10-21

The book deals with several aspects of soil erosion focusing on its connection with the agricultural world Chapters topics are various ranging from irrigation practices to soil nutrient land use changes or tillage methodologies The book is subdivided into fourteen chapters sorted in four sections grouping different facets of the topic introductive case studies erosion management in vineyards soil erosion issue in dry environments and erosion control practices Certainly due to the extent of the subject the book is not a comprehensive collection of soil erosion studies but it aims to supply a sound set of scientific works concerning the topic It analyzes different facets of the issue with various

methodologies and offers a wide series of case studies solutions practices or suggestions to properly face soil erosion and moreover may provide new ideas and starting points for future researches The Soils of Taiwan Zueng-Sang Chen,Zeng-Yei Hseu,Chen-Chi Tsai,2015-04-23 This book presents a comprehensive and up to date overview on soils of Taiwan It includes sections on soil research history climate geology geomorphology major soil types soil maps soil properties soil classification soil fertility land use and vegetation soil management soils and humans soils and industry future soil issues The book summarizes what is known about the soils in Taiwan in a concise and highly reader friendly way **Soil Processes and Current Trends in Quality Assessment** Maria C. Routledge Handbook of Wetlands Alan Dixon, Ian Maddock, 2025-08-29 This handbook provides a comprehensive and interdisciplinary overview of the place value and significance of wetlands presenting perspectives from across the environmental and social sciences. Recent decades have witnessed unprecedented global interest in wetlands and the critical role they play in supporting biodiversity and ecosystem services such as carbon storage flood mitigation as well as their direct benefits for people and society that include the provision of food clean water and a range of cultural services. This Routledge Handbook of Wetlands brings together a wide range of perspectives from social and environmental disciplines and voices from different wetland stakeholders from the global north and south to present an assessment of our current understanding of wetlands their environmental significance and their place in society and policy. A recurring theme of the book is an exploration of how our current knowledge of wetlands that is often fragmented along traditional disciplinary lines can be brought together to enable a more integrated interdisciplinary and social ecological conceptualisation that aligns more closely with real world complex challenges and which offers new directions in wetland management for sustainable development. This handbook will be essential reading for students and scholars of wetland management environmental science water resource management conservation ecology environmental humanities and sustainable development.

Shifting Cultivation and Secondary Succession in the Tropics Albert O. Aweto, 2013-01-01 Shifting cultivation is the predominant system of arable farming in the humid and sub humid tropics where several hundred million people depend on this system of agriculture for their livelihood. This book documents and systematizes findings in shifting cultivation from over the last six decades including characterizing secondary succession and relating the changes that follow vegetation undergoes to the process of soil fertility restoration. This book is essential reading for researchers and students of tropical agriculture and related areas.

Spatial Heterogeneity of Forest-Steppes Laszlo Erdos, 2021-06-03 Forest steppes occupy a wide zone between Eurasian closed canopy forests and open steppes and feature a mosaic of woody and herbaceous vegetation. Due to the occurrence of structurally compositionally and environmentally strongly different habitats in close proximity high spatial heterogeneity is one of the key characteristics of forest steppe ecosystems. This volume presents ten contributions examining forest steppe heterogeneity and its effects on environmental factors plant communities and animals.

Mid-Latitude Slope Deposits (Cover Beds) B. Terhorst, A. Kleber, E. Bibus, 2013-02-26 Cover beds are usually not regarded of use for relative dating. The examples discussed in this chapter demonstrate otherwise. Central European cover beds usually are of Pleistocene age and they can be utilized for distinguishing older landforms such as slope failures covered by one or more cover beds from those which are not covered by periglacial deposits. In the western USA where intervening soil forming episodes provide a stratigraphic framework for such deposits the stratigraphic value of cover bed and soil successions is tested on various types

of landforms However dating landforms relatively by overlying cover beds calls for due consideration of erosion induced hiatuses and of tectonically induced processes out of phase with those driven by climate
