Control of Violence Wilhelm Heitmeyer,Heinz-Gerhard Haupt,Stefan Malthaner,Andrea Kirschner,2010-11-04 The Control of Violence in Modern Society starts from the hypothesis that in modern society we will face an increasing loss of control over certain phenomena of violence This leads to unpredictable escalations and violence can no longer be contained adequately by the relevant control regimes such as police state surveillance institutions national repression apparatuses and international law However before investigating this hypothesis from an internationally and historically comparative perspective the terms and tools for this

undertaking have to be rendered more precisely Since both control and violence are all but clear cut terms but rather highly debatable and contested concepts that may take multiple connotations The main question is whether an increase in certain forms of violence can be explained by the failure or in turn overeffectiveness of certain control mechanisms It is asked for instance which contribution religion can make to limit violence and in turn which destructive potential religion might have in its fundamentalist form Moreover the concept of individual self control as well as social institutions and strategies of collective disengagement and de radicalization are investigated with regard to their potential for controlling violence The Control of Violence in Modern Society concludes with a re examination of the hypothesis of a loss of control by specifying in what cases and under which circumstances we can speak of a loss of control over violence

Money, Capital Formation and Economic Growth Masanori Amano, 2012-11-19 This book proposes new methods of detecting causality among several dynamic variables and of estimating divisions of nominal income changes into changes in output and prices Amano builds on established traditions of macro dynamics and the theories of Keynes and Freidman while providing innovative perspectives and important policy implications

ARCH Models for Financial Applications Evdokia Xekalaki, Stavros Degiannakis, 2010-03-18 Autoregressive Conditional Heteroskedastic ARCH processes are used in finance to model asset price volatility over time This book introduces both the theory and applications of ARCH models and provides the basic theoretical and empirical background before proceeding to more advanced issues and applications The Authors provide coverage of the recent developments in ARCH modelling which can be implemented using econometric software model construction fitting and forecasting and model evaluation and selection Key Features Presents a comprehensive overview of both the theory and the practical applications of ARCH an increasingly popular financial modelling technique Assumes no prior knowledge of ARCH models the basics such as model construction are introduced before proceeding to more complex applications such as value at risk option pricing and model evaluation Uses empirical examples to demonstrate how the recent developments in ARCH can be implemented Provides step by step instructive examples using econometric software such as Econometric Views and the G RCH module for the Ox software package used in Estimating and Forecasting ARCH Models Accompanied by a CD ROM containing links to the software as well as the datasets used in the examples Aimed at readers wishing to gain an aptitude in the applications of financial econometric modelling with a focus on practical implementation via applications to real data and via examples worked with econometrics packages

Uncertainty Analysis in Econometrics with Applications Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, Komsan Suriya, 2012-12-14 Unlike uncertain dynamical systems in physical sciences where models for prediction are somewhat given to us by physical laws uncertain dynamical systems in economics need statistical models In this context modeling and optimization surface as basic ingredients for fruitful applications This volume concentrates on the current methodology of copulas and maximum entropy optimization This volume contains main research presentations at the Sixth International Conference of the Thailand

Econometrics Society held at the Faculty of Economics Chiang Mai University Thailand during January 10 11 2013 It consists of keynote addresses theoretical and applied contributions These contributions to Econometrics are somewhat centered around the theme of Copulas and Maximum Entropy Econometrics The method of copulas is applied to a variety of economic problems where multivariate model building and correlation analysis are needed As for the art of choosing copulas in practical problems the principle of maximum entropy surfaces as a potential way to do so The state of the art of Maximum Entropy Econometrics is presented in the first keynote address while the second keynote address focusses on testing stationarity in economic time series data

Introductory Econometrics for Finance Chris Brooks, 2008-05-22 This best selling introduction to econometrics is specifically written for finance students The new edition builds on the successful data and problem driven approach of the first edition giving students the skills to estimate and interpret models while developing an intuitive grasp of underlying theoretical concepts

Handbook of Research on Emerging Theories, Models, and Applications of Financial Econometrics Burcu Adıgüzel Mercangöz, 2021-02-17 This handbook presents emerging research exploring the theoretical and practical aspects of econometric techniques for the financial sector and their applications in economics By doing so it offers invaluable tools for predicting and weighing the risks of multiple investments by incorporating data analysis Throughout the book the authors address a broad range of topics such as predictive analysis monetary policy economic growth systemic risk and investment behavior This book is a must read for researchers scholars and practitioners in the field of economics who are interested in a better understanding of current research on the application of econometric methods to financial sector data

Applied Econometrics Chung-ki Min, 2019-03-08 Applied Econometrics A Practical Guide is an extremely user friendly and application focused book on econometrics Unlike many econometrics textbooks which are heavily theoretical on abstractions this book is perfect for beginners and promises simplicity and practicality to the understanding of econometric models Written in an easy to read manner the book begins with hypothesis testing and moves forth to simple and multiple regression models It also includes advanced topics Endogeneity and Two stage Least Squares Simultaneous Equations Models Panel Data Models Qualitative and Limited Dependent Variable Models Vector Autoregressive VAR Models Autocorrelation and ARCH GARCH Models Unit Root and Cointegration The book also illustrates the use of computer software EViews SAS and R for economic estimating and modeling Its practical applications make the book an instrumental go to guide for solid foundation in the fundamentals of econometrics In addition this book includes excerpts from relevant articles published in top tier academic journals This integration of published articles helps the readers to understand how econometric models are applied to real world use cases

Money as a Global Phenomenon Andreas Rees, 2011 *Asset Allocation Considerations for Pension Insurance Funds* Christian Hertrich, 2013-04-16 The central research objective of the dissertation is to assess the suitability of Social Responsible Investments SRIs as well as alternative investments for the strategic asset allocation of German Pension

Insurance Funds Pensionskassen Using a Vector Error Correction model we estimate the data generating process of the underlying input variables A bootstrap simulation allows generating future return paths of the underlying portfolios These return distributions will subsequently be used as input for different asset allocation strategies The empirical results of our research study offer valuable conclusions 1 SRI structured portfolios consistently perform better than conventional portfolios 2 including alternative investments has a beneficial effect on the risk return distribution and 3 derivative overlay structures mitigate downside risk exposure without impacting average fund performance In terms of alternative allocation models 1 high equity portfolios lead to an increase in return volatility without sufficiently compensating investors with higher returns 2 hedging against price increases by engineering a portfolio with inflation suitable assets yields mixed results 3 a portfolio composition that combines derivative overlay strategies for both equities and corporate bonds and uses SRI screened assets as underlying generates the best results

Uncertainty, Expectations, and Financial Instability Eric Barthalon, 2014-11-11
Eric Barthalon applies the neglected theory of psychological time and memory decay of Nobel Prize winning economist Maurice Allais 1911-2010 to model investors psychology in the present context of recurrent financial crises Shaped by the behavior of the demand for money during episodes of hyperinflation Allais's theory proves economic agents perceive the flow of clocks time and forget the past at a context dependent pace rapidly in the presence of persistent and accelerating inflation and slowly in the event of the opposite situation Barthalon recasts Allais's work as a general theory of expectations under uncertainty closing the gap between economic theory and investors behavior Barthalon extends Allais's theory to the field of financial instability demonstrating its relevance to nominal interest rates in a variety of empirical scenarios and the positive nonlinear feedback that exists between asset price inflation and the demand for risky assets Reviewing the works of the leading protagonists in the expectations controversy Barthalon exposes the limitations of adaptive and rational expectations models and by means of the perceived risk of loss calls attention to the speculative bubbles that lacked the positive displacement discussed in Kindleberger's model of financial crises He ultimately extrapolates Allaisian theory into a pragmatic approach to investor behavior and the natural instability of financial markets He concludes with the policy implications for governments and regulators Balanced and coherent this book will be invaluable to researchers working in macroeconomics financial economics behavioral finance decision theory and the history of economic thought

The Geopolitics of Energy in South Asia Marie Lall, 2009 Energy security has become a central concern for all the countries in the Asian region and the search for sufficient sources of energy to fuel economic growth has drastically influenced relations among the South Asian countries as well as their respective relations with their neighbours China Myanmar Iran and Afghanistan The recent nuclear deal between India and the US is also indicative of how energy and power politics are linked and how these new inter linkages underlie relations between states This book aims to give a South Asian perspective on the geopolitics of energy with a central focus on India The chapters address how India's global and regional foreign policy

making has changed in light of India's search for energy and how this is affecting the relationship on a global level between India and the US as well as on a regional level between India and the other Asian countries. The book also offers views from Pakistan and Bangladesh as well as how this shifting reality is affecting relations between India and Southeast Asia. S. Co. 2009. Sixth Conference. Complex Data Modeling and Computationally Intensive Statistical Methods for Estimation and Prediction, 2009 *Research Paper PNW.*, 1978
