with Internet technology connectivity and standards particularly TCP/IP is dramatically changing the face of information technology and driving requirements for ever more secure scalable and highly available mainframe TCP/IP implementations. The IBM z/OS Communications Server TCP/IP Implementation series provides understandable step by step guidance about how to enable the most commonly used and important functions of z/OS Communications Server TCP/IP. This IBM Redbooks publication is for people who install and support z/OS Communications Server. It explains how to set up security for your z/OS networking environment. With the advent of TCP/IP and the Internet network security requirements have become more stringent and complex. Because many transactions are from unknown users and untrusted networks such as the Internet careful attention must be given to host and user authentication data privacy data origin authentication and data integrity. Also because security technologies are complex and can be confusing we include helpful tutorial information in the appendixes of this book. For more information about z/OS Communications Server base functions standard applications and high availability see the other following volumes in the series: IBM z/OS V2R2 Communications Server TCP/IP Implementation Volume 1 Base Functions Connectivity and Routing SG24-8360, IBM z/OS V2R2 Communications Server TCP/IP Implementation Volume 2 Standard Applications SG24-8361, IBM z/OS V2R2 Communications Server TCP/IP Implementation Volume 3 High Availability Scalability and Performance SG24-8362. For more information about at what level a specific function was introduced see z/OS Communications Server New Function Summary GC31-8771.

**Exim** Philip Hazel, 2001. Exim delivers electronic mail both local and remote. It's the default mail transport agent installed on some Linux systems; it runs on many versions of Unix and is suitable for any TCP/IP network with any combination of hosts and end user mail software. Exim is growing in popularity because it's open source, scalable and rich in features. These include compatibility with sendmail options, database lookups, support for regular expressions and many kinds of address parsing, sophisticated error handling and parameters for improving performance. Best of all, Exim is easy to configure. You never have to deal with ruleset 3 or worry that a misplaced asterisk will cause an inadvertent mail bomb. Philip Hazel, the creator of Exim, is the author of this official guide designed for access to quick information when you're in a hurry as well as thorough coverage of more advanced material.
