Eubank,Ana Kupresanin,2011-12-01 With the advancement of statistical methodology inextricably linked to the use of computers new methodological ideas must be translated into usable code and then numerically evaluated relative to competing procedures In response to this Statistical Computing in C and R concentrates on the writing of code rather than the development and study of numerical algorithms per se The book discusses code development in C and R and the use of these symbiotic languages in unison It emphasizes that each offers distinct features that when used in tandem can take code writing beyond what can be obtained from either language alone The text begins with some basics of object oriented languages followed by a boot camp on the use of C and R The authors then discuss code development for the solution of specific computational problems that are relevant to statistics including optimization numerical linear algebra and random number generation Later chapters introduce abstract data structures ADTs and parallel computing concepts The appendices cover R and UNIX Shell programming Features Includes numerous student exercises ranging from elementary to challenging Integrates both C and R for the solution of statistical computing problems Uses C code in R and R functions in C programs Provides downloadable programs available from the authors website The translation of a mathematical problem into its computational analog or analogs is a skill that must be learned like any other by actively solving relevant problems The text reveals the basic principles of algorithmic thinking essential to the modern statistician as well as the fundamental skill of communicating with a computer through the use of the computer languages C and R The book lays the foundation for original code development in a research environment **Computational Science - ICCS 2019** João M. Embedded Robotics Thomas Bräunl, 2008-09-20 The EyeBot controller and mobile robots have evolved over more than a decade This book gives an in depth introduction to embedded systems and autonomous mobile robots using the EyeBot controller EyeCon and the EyeBot mobile robot family as application examples This book combines teaching and research material and can be used for courses in Embedded Systems as well as in Robotics and Automation We see labs as an essential teaching and learning method in this area and encourage everybody to reprogram and rediscover the algorithms and systems presented in this book Although we like simulations for many applications and treat them in quite some depth in several places in this book we do believe that students should also be exposed to real hardware in both areas embedded systems and robotics This will deepen the understanding of the subject area and of course create a lot more fun especially when experimenting with small mobile robots The original goal for the EyeBot project has been to interface an embedded system to a digital camera sensor EyeCam process its images locally in real time for robot navigation and display results on a graphics LCD All of this started at a time before digital cameras came to the market in fact the EyeBot controller was one of the first embedded vision systems Internet support at <http://robotics.ee.uwa.edu.au/eyebot> with free download of RoBIOS operating system example programs online documentation simulator
