development and influence future policies toward inclusive excellence in education and the workplace Handbook of Research in Educational Communications and Technology M. J. Bishop, Elizabeth Boling, Jan Elen, Vanessa Svihla, 2020-09-21

The 5th edition of the prestigious AECT Handbook continues previous efforts to reach outside the traditional instructional design and technology community to the learning sciences and computer information systems communities toward developing a conceptualization of the field. However, given the pervasive and increasingly complex role technology now plays in education, since the 1st edition of the Handbook in 1996, the editors have reorganized the research chapters in this edition to focus on the learning problems we are trying to solve with educational technologies rather than to focus on the things we are using to solve those problems. Additionally, for the first time, this edition of the Handbook reflects our field's growing understanding of the importance of design scholarship to inform practice by including design case chapters. These changes for this edition of the Handbook are intended to bring educational technology research into the broader framework of educational research by elaborating on the role instructional design and technology plays as a scholarly discipline in addressing education's increasingly complex issues. Provides comprehensive reviews of new developments in educational technology research and design practice. Includes concrete examples to guide future research and practice in the ways emerging technologies can be used to solve educational problems. Contains extensive references furnished to guide readers to the most recent research and design practice in the field of instructional design and technology. *Using a Competency Development Process Model in Higher Education* Nancy Latham, Johnna Darragh Ernst, Tiffany Freeze, Stephanie Bernoteit, Bradford White, 2023-07-03

What if educational programs designed curriculum with the end in mind: teaching and assessing only the knowledge and skills necessary for success in the workplace and broader life applications? Competency-Based Education (CBE) provides an answer to questions such as this one that key stakeholders such as employers, learners, parents, and educators are asking. In this book, the authors offer a Competency Development Process Model (CDPM) with unique features that emphasize the interdependence of competencies, assessments, and a robust learning journey within a fully developed career pathway. Two case examples are used throughout the book to contextualize the CDPM. There are seven steps of the model: Step 1: Define the Problem; Step 2: Establish the Competency Framework; Step 3: Draft the Competency Statements; Step 4: Establish Competency Measurability; Step 5: Develop Competency Assessments; Step 6: Adopt and Implement Competencies in Learning Journey and Credentialing Systems; Step 7: Evaluate Impact Over Time. The model addresses the importance of situating competencies within a professional learning context using a backward design approach. In doing so, the model aims to elevate the work of designing competencies from merely developing a list of expectations to in-depth analysis and design with the goal of developing competencies that can be readily used for assessment and career pathway development. Each step in the CDPM is treated as a chapter, and each chapter identifies the central question that must be answered, provides an overview of the tasks in the step, and illustrates the steps in action through the two case

examples Each chapter concludes with Your Turn guiding questions for the reader to apply the step to their own context
