

The Immune and Lymphatic System

Antibodies

The body needs help fighting microbes and the toxins they produce. On the surface of microbes are antigens. The antibodies can recognize toxic or foreign antigens, and when they do, the microbe is marked for destruction. Cells, proteins, and other chemicals rush to the marked microbe and attack!

Bone Marrow

Inside your bones is a spongy tissue called bone marrow. It makes red blood cells that help the body carry oxygen, white blood cells to help fight off infections, and platelets that help the blood clot.

Thymus

The blood in your body is monitored and filtered by the thymus. But that isn't all the thymus does – it also produces a special type of white blood cell called T-lymphocytes.

Spleen

The spleen helps to remove microbes by filtering the blood. It destroys old or damaged red blood cells. Most importantly, it makes antibodies and lymphocytes to support our immune system fight off any microbe invaders.

Complement System

The complement system is a big word for the proteins that rush to help the antibodies attack marked microbes.

Lymphatic System

Inside your body is a network of delicate tubes. These tubes make up the lymphatic system and are part of the immune system. These tubes carry a colorless liquid called lymph. The lymphatic system is made up of:

- Lymph nodes – trap microbes and clean lymph
- Lymph vessels – tubes that carry lymph
- Lymphocytes – white blood cells
