

Gearcase Disassembly

Propeller Removal

⚠ WARNING

If gear housing is NOT removed from drive shaft housing, remove and isolate spark plug leads from spark plugs to prevent outboard from accidentally starting while removing and installing propeller.

1. Place a block of wood between anti-ventilation plate and propeller to prevent propeller from turning and to protect hands while removing prop.
2. Remove nut, thrust hub and propeller.

Draining and Inspecting Gear Lubricant

1. Remove both VENT and FILL screws with gaskets.
2. Inspect gear lubricant for metal particles. Presence of a small amount of fine metal particles (resembling powder) indicates normal wear. Presence of large particles (chips) or a large quantity of fine particles indicates need for gear housing disassembly and component inspection.
3. Note color of gear lubricant. White or cream color indicates presence of water in lubricant.

NOTE: When draining gearcase for the first time, lubricant may appear cream colored due to the mixing of assembly lubricant and gear lubricant. This is NOT an indication of water intrusion. If, during subsequent draining of gearcase, lubricant appears cream colored or milky, water may be present; gearcase should be disassembled and all gaskets, seals and O-rings replaced. Inspect all components for water damage.

4. Check drain pan for water separation from lubricant. Presence of water in gear lubricant indicates the need for disassembly and inspection of oil seals, seal surfaces and gear housing components.

Bearing Carrier

1. Remove bearing carrier (LEFT HAND thread) using Bearing Carrier Tool.

2. Remove carrier and propeller shaft assembly from housing.

NOTE: Cam follower is free to slide out of propeller shaft.
