

How to use Manual Mode

a NO-BS guide to camera settings :)

less light, freezes action

Shutter Speed

is a fancy way of saying, how quickly the shutter opens & closes. The key thing to note here is that by using a slow shutter speed, you'll let in more light & the photo will be brighter... BUT you run the risk of having a blurry photo if you're not using a tripod.

more light, blurs action

subject in focus, brighter

Aperture

is a fancy way of saying, controlling the size of your lens opening

Its also referred to as your f-stop. The key thing to note here is that by using a smaller f-stop (ie f/1.4), you'll let in MORE light & you'll get that "blurry background" effect. By using a larger f-stop (ie f/22), you'll let in less light & your ENTIRE image will be sharp & in focus (great for landscape photos).

everything in focus, darker

Choose a small f-stop if you want a "shallow depth of field" or "blurry background"

f/1.4 f/2.2 f/2.8 f/4 f/5.6 f/8 f/11 f/16 f/22

less grain, use in daylight

ISO

is a fancy way of saying, increase the brightness.

BUT the key thing to note here is that by increasing your ISO, you're also going to increase the amount of GRAIN or "digital noise" in your final image. So you want to keep your ISO as LOW as possible during daylight, then gradually increase as it gets dark out (aka night photography).

more grain, use at night

Choose a low ISO (ie ISO 100) during the day. Gradually increase as it gets dark out.
