Vascular Involvement in Eye Diseases, 2024-01-16 Retinal vessels have embryological anatomical and physiological similarities with coronary and cerebral vessels and many systemic vascular pathologies such as hypertension diabetes and cardiovascular disease affect the retinal vessels from function to structure In addition ocular disorders that constitute major public health problems either directly involve retinal and/or choroidal vessels such as age related macular degeneration and diabetic retinopathy or have vascular factors as risk factors such as myopia or glaucoma Understanding the vascular processes that occur in these diseases could advance our understanding of visual compromise associated with these disorders and possibly their prevention Moreover using the eye as a window to the vascular health of the human body is also of major interest As such many efforts are made to develop technologies that are able to assess in a non invasive way the functional and structural changes of retinal and choroidal vessels and provide biomarkers of ocular and systemic vascular diseases These technologies could be used to assess not only the individual risk for development and progression of vascular disease at both the systemic and ocular level but also the efficacy of various interventions from prevention and medical treatments to surgical and laser procedures

Primary Eye Examination Jong-Soo Lee, 2019-04-01 This book is a comprehensive in depth and up to date resource on eye examination that will be of great practical value for ophthalmologists and optometrists The aim is to guide the practitioner through the diagnostic process and the implications for management of the ocular patient and in so doing to demonstrate that it is possible to reach appropriate decisions on the basis of eye examination Every year existing ocular equipment is being upgraded and new diagnostic equipment is appearing on the market This book reflects recent progress in upgrading by providing information and guidance on the latest innovations in ocular examination and eye testing while also highlighting the continuing important role of the traditional eye test The coverage accordingly ranges from such long established techniques as ophthalmoscopy tonometry and slit lamp examination through to the latest advances in OCT technologies digital fundus photography confocal scanning laser ophthalmoscopy ocular ultrasound and angiography The authors hope that the book will assist all practitioners who perform ophthalmologic examinations

Efficient Artificial Intelligence (AI) in Ophthalmic Imaging Yanda Meng, Yalin Zheng, Haoyu Chen, Meng Wang, 2025-01-07 Ophthalmic imaging techniques such as optical coherence tomography OCT OCT angiography OCTA fundus photography and fluorescein angiography generate vast amounts of visual data allowing for a

detailed examination of the eye's structure and function. These images provide invaluable insights into the presence and progression of various ocular diseases such as age-related macular degeneration, diabetic retinopathy, and glaucoma. While ophthalmologists possess expertise in interpreting these images, the manual analysis of large datasets can be time-consuming, prone to errors, and subject to inter-observer variability. Artificial Intelligence (AI)-based approaches have emerged as promising tools to augment the diagnostic capabilities of ophthalmologists, enabling faster and more accurate assessments. This proposal aims to explore and develop innovative approaches, including but not limited to transfer learning, active learning, semi-supervised learning, weakly supervised learning, meta-learning, graph neural networks, multimodal learning, and federated learning, etc., to enhance the efficiency and effectiveness of AI in ophthalmic imaging. This collection aims to promote research that improves the accuracy, scalability, interpretability, and generalization of AI models for ophthalmic imaging. This Research Topic welcomes manuscripts on the following themes:

Annotation-efficient AI Manual data annotation is a labor-intensive and time-consuming process that often poses challenges in terms of scalability, cost, and subjectivity. This topic aims to explore innovative approaches and techniques to develop annotation-efficient AI models that can leverage minimal data annotation while maintaining high performance and generalization, such as active learning, semi-weakly supervised learning, etc.

Retinal Degenerative Diseases John D. Ash, Robert E. Anderson, Matthew M. LaVail, Catherine Bowes Rickman, Joe G. Hollyfield, Christian Grimm, 2018-05-02 The blinding diseases of inherited retinal degenerations have no treatments, and age-related macular degeneration has no cures despite the fact that it is an epidemic among the elderly, with 1 in 34 affected by the age of 70. The RD Symposium will focus on the exciting new developments aimed at understanding these diseases and providing therapies for them. Since most major scientists in the field of retinal degenerations attend the biennial RD Symposia, they are known by most as the best and most important meetings in the field. The volume will present representative state-of-the-art research in almost all areas of retinal degenerations, ranging from cytopathologic, physiologic, diagnostic, and clinical aspects, animal models, mechanisms of cell death, candidate genes, cloning, mapping, and other aspects of molecular genetics, and developing potential therapeutic measures such as gene therapy and neuroprotective agents for potential pharmaceutical therapy. While advances in these areas of retinal degenerations will be described, there will be many new topics that either were in their infancy or did not exist at the time of the last RD Symposium, RD2014. These include the role of inflammation and immunity, as well as other basic mechanisms in age-related macular degeneration, several new aspects of gene therapy, and revolutionary new imaging and functional testing that will have a huge impact on the diagnosis and following the course of retinal degenerations, as well as to provide new quantitative endpoints for clinical trials. The retina is an approachable part of the central nervous system (CNS), and there is a major interest in neuroprotective and gene therapy for CNS diseases and neurodegenerations in general. It should be noted that, with successful and exciting initial clinical trials in neuroprotective and gene therapy, including the restoration of sight in

blind children the retinal degeneration therapies are leading the way towards new therapeutic measures for neurodegenerations of the CNS Many of the successes recently reported in these areas of retinal degeneration sprang from collaborations established at previous RD Symposia and many of those will be reported at the RD2018 meeting and included in the proposed volume We anticipate the excitement of those working in the field and those afflicted with retinal degenerations will be reflected in the volume

Corneal Transplantation Namrata Sharma,Ritu Nagpal,Rasik B Vajpayee,2022-11-09 The cornea is the clear outer layer at the front of the eyeball It acts as a window to the eye The cornea helps to focus light rays onto the retina this image is then transmitted to the brain When the cornea is damaged it can become less transparent or its shape can change This can prevent light reaching the retina and causes the picture transmitted to the brain to be distorted or unclear A corneal transplant also known as keratoplasty or a corneal graft is an operation to remove all or part of a damaged cornea and replace it with healthy donor tissue It is used to improve sight relieve pain and treat severe infection or damage One of the most common reasons for a cornea transplant is a condition called keratoconus which causes the cornea to change shape NHS UK This book is a guide to corneal transplantation keratoplasty for ophthalmic surgeons Divided into seven sections the text begins with an overview of evolution preoperative considerations and eye banking The following sections cover a multitude of keratoplasty techniques including endothelial keratoplasty and their potential complications The book concludes with discussion on alternatives to corneal transplantation The third edition of this comprehensive manual has been fully revised with new topics added to provide surgeons with the latest advances in the field A selection of operative videos can be accessed via a QR code provided in the book The previous edition 9788184488593 published in 2010

Microglia in Health and Disease: A Unique Immune Cell Population Alessandro Michelucci,Michel Mittelbronn,Diego Gomez-Nicola,2018-10-05 Microglia are essential for the development and function of the adult brain Their ontogeny together with the absence of turnover from the periphery and the singular environment of the central nervous system CNS make microglia a unique cell population compared to other tissue macrophages The unique properties and functions of microglial cells such as their role in synaptic pruning or the exceptional capacity to scan the brain parenchyma and rapidly react to its perturbations have emerged in recent years In the coming years understanding how microglia acquire and maintain their unique profiles in order to fulfil distinct tasks in the healthy CNS and how these are altered in disease will be

essential to develop strategies to diagnose or treat CNS disorders with an immunological component This Research Topic covers several aspects of microglial biology ranging from their origin and the functional role of microglia during development and lifespan their molecular properties compared with other brain and peripheral immune cells to microglial phenotypes and functional states in neurodegenerative diseases and brain tumours In conclusion the present Research Topic provides a comprehensive overview of our current understanding of several cellular and molecular mechanisms that make microglia a unique immune cell population within the healthy CNS as well as under inflammatory neurodegenerative and tumorigenic processes

Ocular Imaging Technology and Application Xinyu Liu,Bingyao Tan,Leopold Schmetterer,Xiaojun Yu,2025-04-07 Advanced ocular imaging has become an essential part of clinical vision care During the last two decades imaging tools have dramatically expanded from classic instruments such as slit lamp photography fundus photography and sonography to advanced devices such as scanning laser ophthalmology optical coherence tomography OCT OCT angiography and more Recently artificial intelligence AI has emerged and revolutionized the field of image post processing and interpretation More recent ocular imaging technologies including robotic auto align eye scanners and interpretable diagnostic AI systems are under development Furthermore using novel techniques to address unmet clinical needs underlines joint efforts and multidisciplinary collaboration among scientists engineers and clinicians
