## **7.1 Introduction of the Unit of Learning /Unit of Competency**

Material science is the investigation of the relationship among processing, structure, properties, and performance of materials. This unit prepares the trainee to be able to select a material for a given use based on considerations of cost and performance, understand the limits of materials and the change of their properties with use, and create a new material that will have some desirable properties. This branch of science encompasses: determining the structure, measuring the properties of materials, devising suitable ways of processing them i.e. creating materials, transforming existing materials and making useful things out of them, thus materials scientists think about how a material is suited to the purpose it serves already and how it may be enhanced to give better performance for particular applications.

All engineers are involved with materials on a daily basis: They manufacture, process materials, design and construct component or structures using materials, analyze failures in materials. This unit is meant to create awareness to trainees on the types of materials available, to understand their general behavior and capability and to recognize the effects of the environment and service condition and the material performance

## **7.2 Performance Standard**

Test and analyze properties of engineering materials as per material testing method and operation standards procedures. Tabulate, calculate and interpret material testing results, maintain testing machines while observe safety procedures according to OSHA.
